WEBSITE BLUEPRINT

SAFER COMMUNITIES UNITED — KEYSTONE–ODESSA

blueprint copy nr 3 | First clickable demo. Build the pages, approved text, selected images and navigation. Purple text inside ((double parentheses)) is retained for later and is not part of this demo build. Red crossouts have been removed.

How to use this blueprint

Use the current page-specific on-screen copy with its selected image. Longer explanations and source notes support detail sections; they are not extra copy to squeeze into the displayed mockup. The foundation navigation and reusable footer specifications govern all pages. Retain the supplied map originals and the intentional multi-panel previews.

The selected Growth & Housing design is Screenshot 110, “Two Ways of Managing Growth and Housing.” The density illustration uses the natural rural-lane version. The Action hero omits the removed “After learning…” paragraph. Keep supporter signup separate from petition signing, and use the complete approved petition including associated policies and Land Development Code Part 3.08.00.

Build now: a simple click-through website demo for reviewing the pages, content, images and navigation. Keep desktop and mobile layouts readable. Buttons open the relevant page, section or a clearly labelled demo preview. Use static maps and illustrative form layouts. No real signup, signature collection, file upload, email sending or personal-data submission.

((Later production scope: build a fully functional site for private, password-restricted review, with real signup storage and public-launch setup. Implement backend forms, validation, separate consents, persistent records, truthful confirmations, secure admin access, export, backups and spam protection. Keep test records separate. Finalize privacy, retention, storage/provider, contact and access settings before enabling personal-data collection; do not collect third-party data without consent. The supporter and petition specifications below govern implementation. Public publishing, campaign email and County submissions require separate approval. Sample figures, library records and testimonials remain illustrative. Existing launch checks remain open; they do not prevent building.))

Creator checklist for this demo: link every main menu item and page CTA; keep the selected artwork and current copy; use ordinary source links when a supplied destination exists; use a labelled preview when content or a destination is not yet supplied. Do not invent records, source URLs, successful submissions or live results.

Forms and action controls: show “Demo only. Nothing is submitted or saved.” beside supporter, petition and story previews. Render fields as non-editable examples; signing, uploading, subscribing and sharing controls open an explanatory demo state. Keep approved declarations and petition wording readable. Do not connect these previews to a service.

Future-ready foundation: use reusable page components and separate content and image assets from presentation. Choose a platform that can later connect to a backend/API and embed an interactive map. Stable page routes and a dedicated map area are enough now; do not build those services in this phase.

((Later: real database and admin tools; supporter and petition records; signature capture; consent, privacy and retention setup; email and unsubscribe services; uploads and moderation; search and filtering; live GIS layers and routing; authentication, production security, backups, integrations and public deployment. Preserve the detailed requirements below until that phase is approved.))

Demo review: check that every page can be reached and returned from, links have sensible destinations, text and images remain readable on phones, and basic keyboard navigation works. Keep

sample-data, conceptual-image and source caveats visible. Public launch and third-party submissions remain separate decisions.

PART I — WEBSITE FOUNDATION

1. WEBSITE GOALS

The Safer Communities United website aims to:

- Show residents that the current Community Plan is causing problems and consequences for the health, safety, environment, and welfare of Keystone–Odessa.
- Clearly present the issues related to roads, water and septic, infrastructure, growth, housing, and access to essential services.
- Demonstrate these issues through data, maps, public records, official documents, and the actual conditions of the community.
- Show the connection between Community Plan rules → actual conditions → consequences for people and the environment.
- Compare the Keystone–Odessa Community Plan with the Hillsborough County Comprehensive Plan to clearly show the differences in policies, planning tools, and the ability to address current issues.
- Present the proposal to remove the current Community Plan and move to an appropriate countywide planning framework.
- Gather community support after residents understand the issues, the evidence, the differences between the two planning frameworks, and the direction of the proposed change.

Core Flow:

Problem → Consequences → Evidence → Comparison → Solution → Action

---

2. VISITOR JOURNEY

01 — Recognize the Problems: Roads & Safety · Water & Septic · Infrastructure · Growth & Housing · Essential Services · Outdated Community Plan.

02 — Understand the Consequences: Health · Safety · Environment · Welfare · Daily Life.

03 — See the Evidence: Data · Maps · Public Records · Official Documents · Community Plan · County Policies · Historical Records.

04 — Understand How the Community Plan Is Connected: Current Rules → Actual Conditions → Impacts and Consequences.

05 — Compare the Two Planning Frameworks: Keystone–Odessa Community Plan ↔ Hillsborough County Comprehensive Plan, issue by issue.

06 — Understand the Direction of Change: Show what the Community Plan is limiting, what tools the countywide planning framework provides, and how changing the planning framework could address current issues.

07 — Take Action: Support · Share · Participate · Follow.

---

3. WEBSITE STRUCTURE

The website includes 7 main content groups:

Home — introduces the major issues and leads residents into the story.

Issues — roads & safety, water & septic, growth, infrastructure, housing, services, and the Community Plan.

Evidence — data, maps, public records, and official documents.

Comparison — the Community Plan and the Hillsborough County Comprehensive Plan.

Proposed Change — explains the planning framework proposed to replace the current one.

Action — gathers community support, sharing, and participation.

About — Safer Communities United, sources, methods, and contact information.

Main Navigation:

Our Community | Issues | The Facts | The Proposal | Take Action | About

Highlighted Button:

Get Involved

Navigation routing: Our Community opens the existing Home/community content; The Facts opens Evidence & Records; The Proposal opens the proposed-change content and includes access to the existing Community Plan vs. County Comprehensive Plan section; Take Action and the highlighted Get Involved button open Action. Issues and About retain their existing destinations.

Comparison access: under The Proposal, retain a clearly labelled Compare the Two Plans link to the existing Community Plan vs. County Comprehensive Plan section anchor. Comparison remains part of the content structure, without a separate top-level menu item. Reuse the existing destination; no new URL is required.

Implementation: use these exact public-facing menu labels consistently in desktop and mobile navigation and matching footer links. Internal blueprint page titles and content-group names can remain descriptive; they do not override the approved menu labels.

---

4. DESIGN SYSTEM

Overall Style

The website should have a local-community style that is serious, modern, and evidence-based.

The design should be clean, spacious, easy to read, and create a sense of trust.

Prioritize large amounts of white space, limited text on each screen, real images, maps, data, and official records. Each section should focus on only one main message.

Colors

Use only a small and consistent main color palette:

Dark Navy — #17324D

The main color of the website. Use it for headings, important text, the navigation bar, footer, and sections that need to create a serious feeling.

Teal — #28736D

Use it for water, environment, data, maps, and content related to solutions or the countywide planning framework.

Coral Red — #C55245

Accent color. Use it for serious issues, data that needs attention, highlights, and the main action button.

Do not use it too much, so the color keeps its visual impact.

Cream White — #F7F4EE

Main background color, creating a warm and easy-to-read feeling.

White — #FFFFFF

Use it for content cards, documents, and reading areas.

Light Gray — #D8DEE3

Use only for divider lines, borders, and secondary information.

Principle: Navy + cream white are the foundation; teal and coral are the two accent colors. Do not add many additional colors on individual pages.

Typography and Content Hierarchy

Headings: Source Serif 4 or Merriweather — creates a serious, editorial feel that is also suitable for community-focused content.

Body Text: Inter — clear, modern, and easy to read on both computers and phones.

The typography system includes:

- Main Heading: the most important message on the page.
- Section Heading: opens a major content section.
- Card Heading: the name of an issue or piece of evidence.
- Small Label: used for groups such as ISSUES · DATA · PUBLIC RECORDS · COMPARISON.
- Body Content: short, preferably 1–3 sentences for each block.

Long paragraphs are reserved for detailed pages.

Buttons and Links

Buttons should be large, clear, and easy to recognize.

Primary Button: coral red background, white text.

Secondary Button: navy or teal border.

Content Link: text + arrow.

Button names should clearly tell users what the next step is, for example:

View the Issue →

View the Evidence →

View the Original Record →

Compare the Two Plans →

View the Proposal →

Each area should have only one main action, avoiding multiple buttons competing with one another.

Content Cards

Use one consistent card system throughout the website:

Issue Card — image + heading + key information + button to view details.

Data Card — large number + short label + source.

Evidence Card — document/map image + key finding + source.

Comparison Card — Community Plan ↔ Countywide Planning Framework.

Timeline Card — year + event + related document.

Cards should be simple, use limited text, have a light background, and have generous spacing.

Data, Maps, and Sources

Data: display numbers in a large, easy-to-see format, with a short description.

Maps: include a title, clear legend, and source; highlight only the data layers needed for the message being presented.

Public Records: display an image or visual excerpt of the document, together with the date, agency, key content, and a link to the original document.

Sources: place each source close to the fact it supports, but keep the presentation compact so it does not make the interface look cluttered.

White Space and Layout

Pages must be clean, spacious, and easy to scan.

- One section focuses on one message.
- Do not place too many cards on the same screen.
- Do not use long paragraphs on overview pages.
- Alternate appropriately between text, images, maps, data, and documents.
- Keep the main content within a comfortable reading width. Avoid spreading text across the full width of the screen.
- Clearly separate important sections with white space or a slight background change.

Header

The header should be simple, have a light background, and stay fixed while scrolling.

Safer Communities United | Our Community | Issues | The Facts | The Proposal | Take Action | About

On the right, include a highlighted action button:

Get Involved

On mobile: logo + menu button, keeping the interface compact and making sure it does not cover the content.

Footer

Navy background, simple structure.

Safer Communities United

Putting the health, safety, and welfare of people first.

The main links are divided into three groups:

Explore: Our Community · Issues · The Facts · The Proposal

Get Involved: Take Action · Updates · Contact

Information: About · Sources & Methods · Accessibility · Edits · Privacy

Shared component implementation: the foundation footer specification governs the reusable footer. Older mockup footer variants are illustrative; do not treat differing slogans or link groups as separate requirements.

---

5. VISUAL CHARACTERISTICS

Overall Style: Real Documents · Evidence · Community.

Photos: prioritize real photos of roads, intersections, traffic, lakes, wells, septic, drainage, housing, infrastructure, and essential services in Keystone–Odessa.

Maps: use maps to show the Community Plan boundary, road network, septic, private wells, water-protection areas, lakes/wetlands, water/wastewater infrastructure, and monitoring points.

Charts: prioritize large data figures, timelines, layered maps, connection diagrams, and visual comparisons.

> **Public Records: present them in the format Document → Date → Key Content → Source, with the option to open the original document.**

Comparing the Two Maps

Use the two maps that were provided:

"The NIMBY Map" — shows the Community Plan boundary.

"The Actual Map" — shows the actual road network and the wider area used by residents, commuters, school traffic, emergency services, and people traveling through the area.

Use the stacked static map comparison in Home section 2A. ((Later: full-screen zoom for each map.))

---

6. GENERAL LAYOUT TEMPLATES

> **Issue Page: Problem → Consequences → Actual Conditions → Data/Maps → Public Records → Community Plan → Comparison → Next Page.**
>
> **Evidence Page: Key Finding → Data → Maps → Public Records → Official Documents → Timeline → Sources.**
>
> **Comparison/Proposal Page: Community Plan ↔ Countywide Planning Framework → Policy Differences → Real-World Impacts → Proposed Change → Sources.**
>
> **Action Page: What Needs to Change → Why It Matters → Proposal → Support → Participate → Share.**

PART II — PAGE-BY-PAGE BLUEPRINT

PAGE 01 — HOME PAGE

1. PURPOSE

The Home Page immediately shows visitors the main issues affecting the health, safety, environment, and welfare of Keystone–Odessa.

Detailed data, policies, records, and analysis are presented on the corresponding pages.

---

2. INTRODUCTION

On-screen eyebrow: A SAFER, STRONGER KEYSTONE–ODESSA

Main Heading

Putting the health, safety, and welfare of people first.

Message

We envision a future where community growth protects people and places—supported by responsible planning, safer infrastructure, environmental stewardship, and decisions that reflect the needs of today's residents and generations to come.

Problem Message

The Keystone–Odessa community's health, safety and welfare is endangered due to its outdated community plan.

Visual

The real Keystone–Odessa, prioritizing roads, traffic, residential areas, and the local landscape.

Buttons

View the Issues → | View the Evidence →

2A. MAP COMPARISON — AFTER THE INTRODUCTION

THE NIMBY MAP

Source: Keystone–Odessa Community Plan

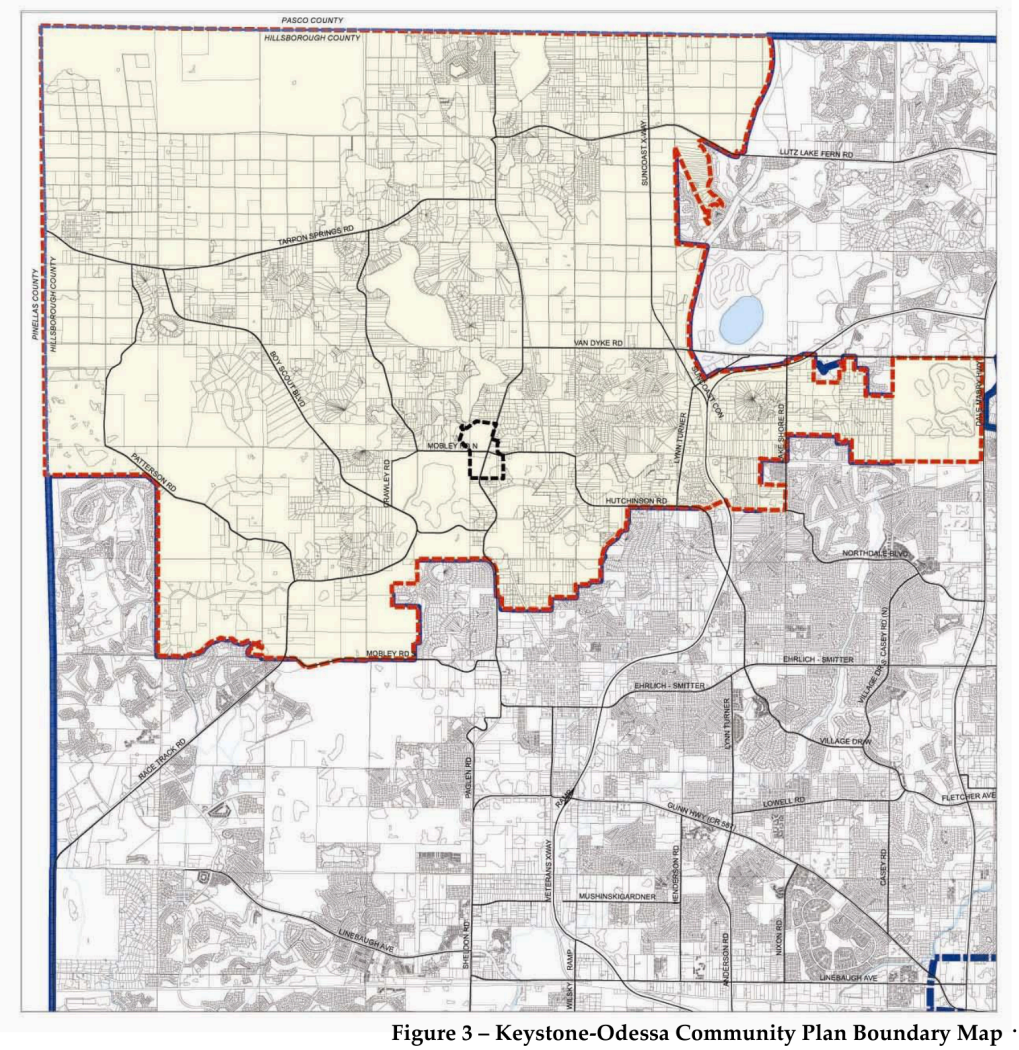

Figure 3 – Keystone-Odessa Community Plan Boundary Map

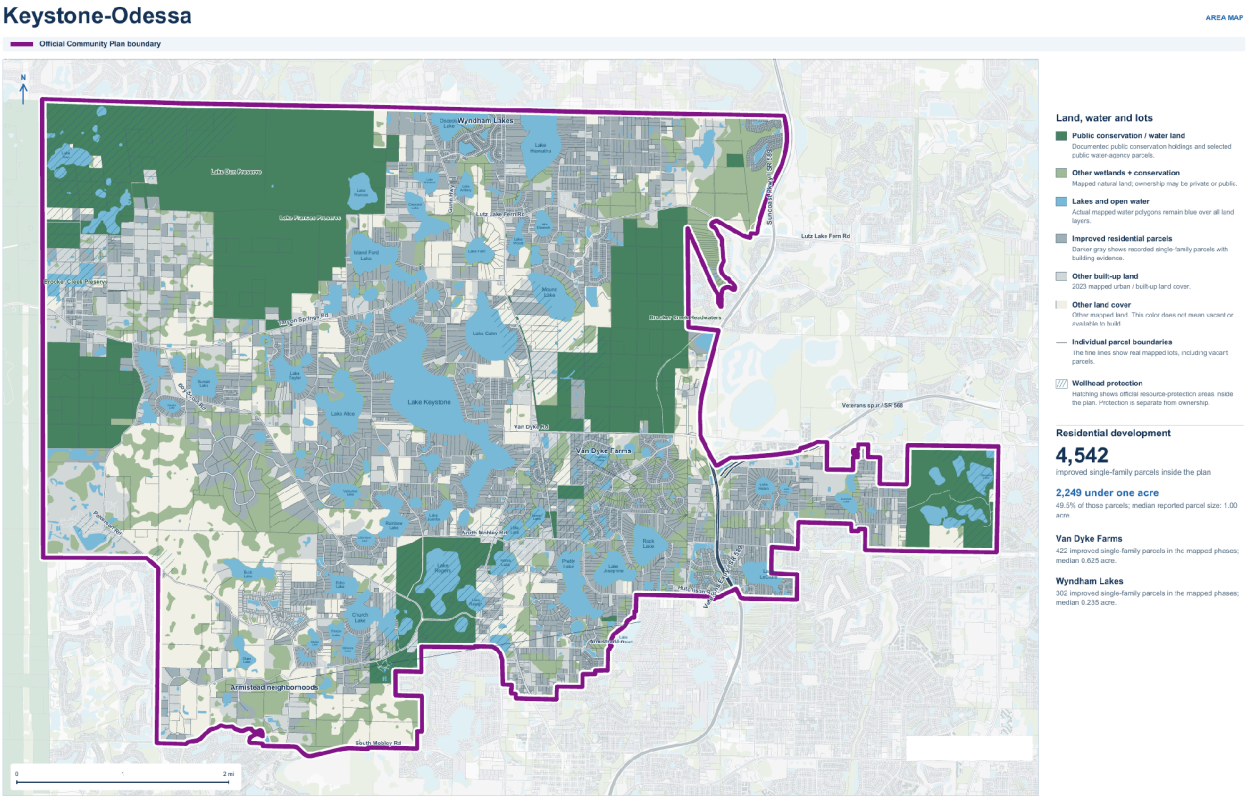
View the official map — Figure 3, page 17

VS.

WHAT THE NIMBY MAP DOESN'T SHOW YOU

The land. The neighborhoods. The traffic.

Added detail: land protections, parcel sizes and traffic volumes.



LOOK AT WHAT'S ALREADY HERE.

Existing homes, divided lots and major roads are part of Keystone–Odessa today. The map shows an established residential community alongside its natural landscape.

THE COMMUNITY PLAN ISN'T THE ONLY THING PROTECTING NATURE.

Over one-third of the Keystone–Odessa Community Plan area is mapped conservation land, lakes, reservoirs or ponds.

Public conservation lands and lakes are part of what makes this area special. Separate ownership and environmental protections also matter; removing the Community Plan would not automatically remove them.

GIS measurement, 16 October 2026: 34.3% (8,025 of 23,387 acres); conservation land and mapped lakes/reservoirs/ponds clipped to the adopted Plan boundary, with overlaps counted once. Sources: Plan Hillsborough; FNAI (September 2026); acquired ELAPP; SWFWMD (2023).

PROTECT THE LANDSCAPE. QUESTION THE PLAN.

PROTECT NATURE. PROTECT PEOPLE.

Conservation lands, lakes and water-resource protections already exist here.

THOUSANDS OF HOMES. REAL INFRASTRUCTURE NEEDS.

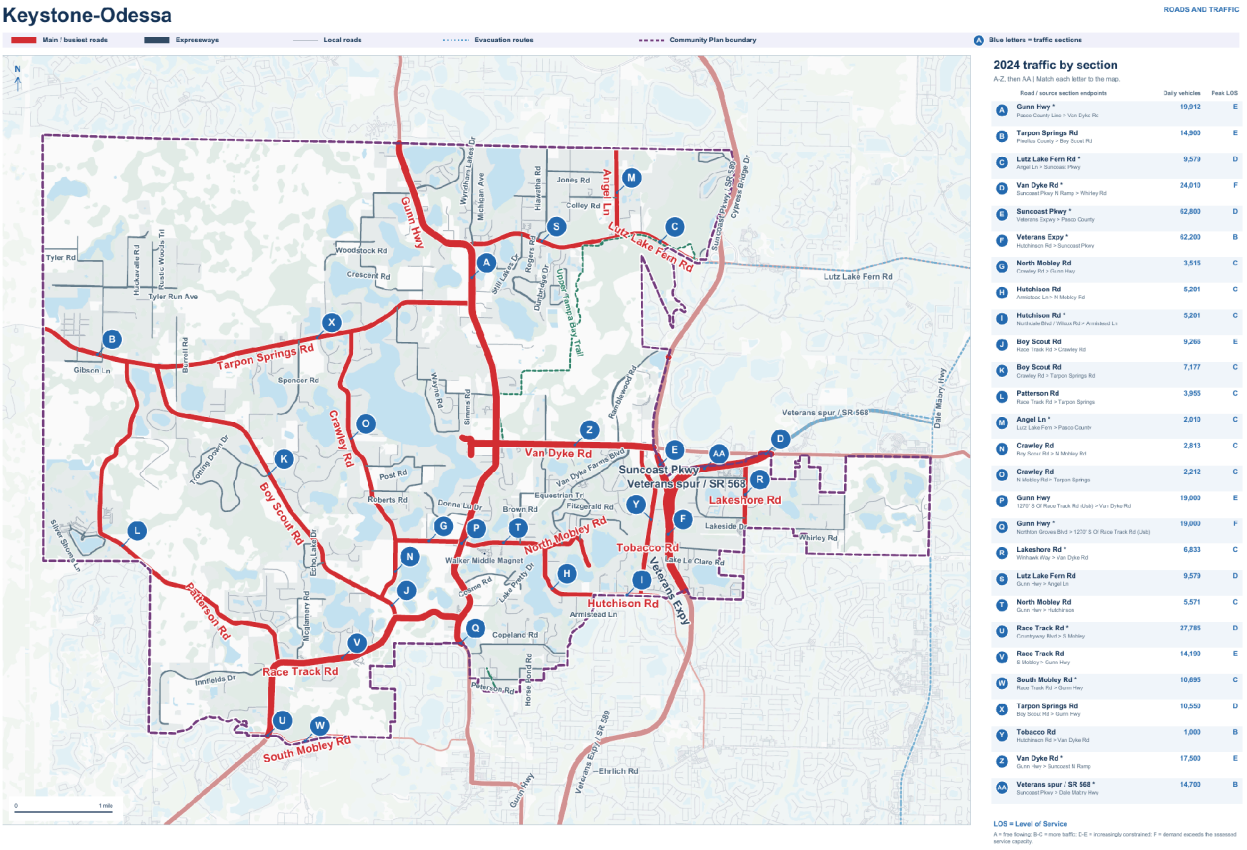
Our parcel analysis identified 4,542 improved single-family parcels. Nearly half were smaller than one acre. Infrastructure decisions must reflect the community already here.

SCU analysis of the October 2, 2026 County GIS snapshot: 2,249 of 4,542 selected improved single-family parcels had reported acreage below one acre (49.5%). Parcels are not a count of occupied homes. Public holdings, wetlands and water-protection layers describe different protections; they are not all government-owned land.

Parcel source and calculation inputs — County parcel GIS

Official Community Plan boundary — County GIS

MAJOR ROADS. EVERYONE'S SAFETY MATTERS.



One Gunn Highway section carries nearly 20,000 vehicle movements a day. People living here and traveling through deserve better options.

2024 annual-average daily traffic: 19,912 on Gunn Highway, Pasco County line to Van Dyke Road. This measures vehicle movements, not unique people or injuries. SCU map compiled from County road and traffic data.

Read the County's 2024 traffic data

Continue to Roads & Safety: see why the Van Dyke study excluded Gunn Highway to west of Suncoast Parkway from capacity-improvement analysis because of Comprehensive Plan constraints.

Read the Van Dyke study scope — page 13

KEEP THE LANDSCAPE.

Primary button: Explore the evidence → Secondary link: Read the petition →

Additional link: Become a supporter → opens the combined Supporter Application in Action → ADD YOUR SUPPORT.

DEVELOPER IMPLEMENTATION

Place this section immediately after the existing homepage introduction and before Main Issues. Keep the opening homepage design unchanged. Stack the official map, area map and roads map vertically; use full-width images rather than a side-by-side comparison or slider.

Demo: display the supplied static maps with readable previews, intact labels, legends, source credits and proportions. A simple link may open the supplied full-size image or PDF. ((Later: each map opens in a full-screen viewer with zoom, pan, a visible close button and a download-original-PDF option. On mobile, provide accessible viewer controls; never crop away the legend.))

Use the exact supplied map files for implementation. The preview below is a layout illustration; it is not a replacement GIS source. The detailed-map section adds conservation classifications, parcel-size analysis and traffic volumes to the official boundary map, which already depicts parcel lines and major roads.

Use compact “Read the source” links beside each fact. Show parcel methodology as a plain text note: unique tax folios assigned to the official boundary by an interior point; single-family classification, positive building value and at least one recorded building; full reported parcel acreage. The October 2 snapshot is dated, not a live count. ((Later: make the methodology note expandable.))

Link “Explore the evidence” to the evidence page; link the roads note to Roads & Safety and its Van Dyke source; link “Read the petition” to the exact approved petition text. Use descriptive alt text, keyboard-accessible links and controls, and a text summary alongside each map. ((Later: keyboard-accessible map zoom.))

3. MAIN ISSUES

Heading

The outdated Community Plan is affecting the health, safety, and welfare of Keystone–Odessa.

On-screen heading: Major problems under the current community plan. Keep the opening Home design unchanged.

On-screen eyebrow: OUR KEY ISSUES

Click on each issue below to learn more about how these problems impact our community and why change is needed.

Display 4 large cards:

Our roads are dangerous!

Traffic, intersections, lighting, road safety and emergency access put residents, students and commuters at risk.

Visual: Gunn Highway or a real intersection.

Button: View Roads & Safety →

Our water is at risk!

1,626 known septic systems, 1,210 likely septic, and 806 repair records. Septic systems and wells threaten groundwater, drinking water, health and the environment.

Visual: Water + wells/septic + map.

Button: View Water & Septic →

Everyday needs are harder to access!

Housing, commute time, healthcare, food, jobs and essential services are limited due to current restrictions.

Visual: Housing → Roads → Services.

Button: View Growth & Daily Life →

The Community Plan is holding our community back!

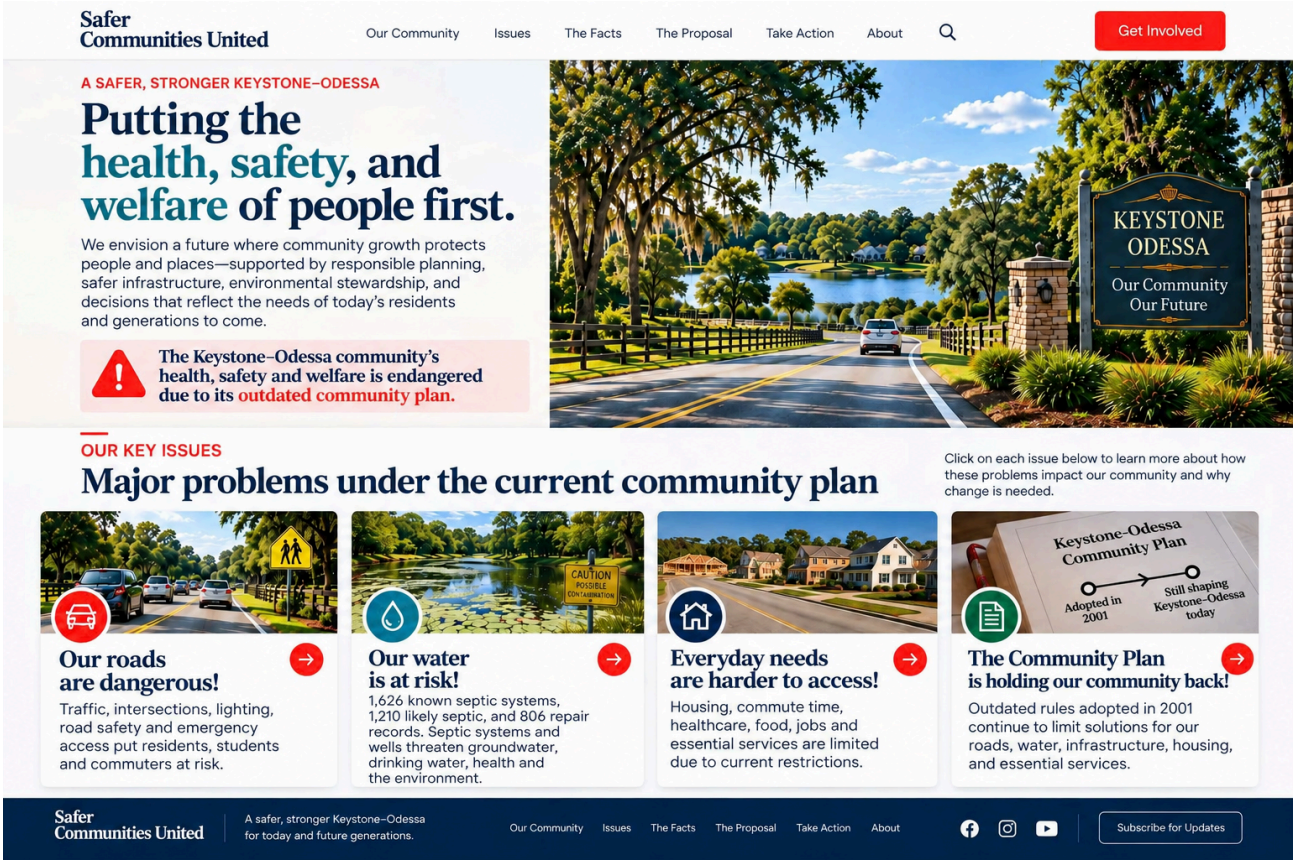
Created in 2001 · Still shaping Keystone–Odessa today

The Keystone–Odessa Community Plan was adopted in 2001 and continues to apply as a separate policy layer over the area.

On-screen card copy: Outdated rules adopted in 2001 continue to limit solutions for our roads, water, infrastructure, housing, and essential services.

Visual: Community Plan document + timeline.

Button: View the Community Plan →



PAGE 02 — ISSUES

1. PURPOSE

This page expands the 4 issue groups introduced on the Home Page, helping visitors clearly understand the specific issues within each group and how they affect the community.

This page should help visitors:

- Understand the full picture of the issues related to the Community Plan.
- See the specific issues within each group.
- Understand the connection between the Community Plan, the actual conditions in Keystone–Odessa, and health, safety, the environment, and welfare.
- Choose which issue they want to explore in more detail.

Each issue group leads to a corresponding detailed page, where related data, maps, public records, official documents, and policies are presented.

---

2. EXPLORE THE ISSUES AFFECTING KEYSTONE–ODESSA

On-screen heading: Issues affecting Keystone–Odessa.

GROUP 01 — ROADS & SAFETY

Heading

Roads must meet the safety needs of today’s community

Main Content

The Community Plan contains specific rules related to roads, road expansion, and lighting. These rules affect the ability to address Keystone–Odessa’s current transportation and safety needs.

Specific Issues

Gunn Highway

The Community Plan states that Gunn Highway cannot be expanded beyond its current configuration, affecting options for addressing capacity and safety on this important transportation corridor.

Street Lighting

The Community Plan limits street lighting and allows it only in certain situations related to safety.

Traffic and Intersections

Traffic volume and intersections create a need for safety solutions that fit current conditions.

Walking and Biking

Infrastructure for pedestrians and cyclists is limited on many roads.

Emergency Access

Road conditions and limits on infrastructure improvements affect mobility and access during emergencies.

Road Network Serving the Wider Area

Roads in and around Keystone–Odessa are used by residents, commuters, students, customers, healthcare workers, emergency responders, delivery vehicles, and people traveling between nearby areas.

Visual

A photo of Gunn Highway or an actual local road combined with icons for:

Traffic · Lighting · Pedestrians · Bicycles · Emergency Response

Button

Explore Roads & Safety →

Current on-screen copy for the selected image

From roads and water to growth, housing, infrastructure and essential services, the current Community Plan creates real challenges for today’s residents. Explore each issue below to see how these problems affect our community and why change is needed.

Gunn Highway — A key corridor with specific restrictions under the current Community Plan.

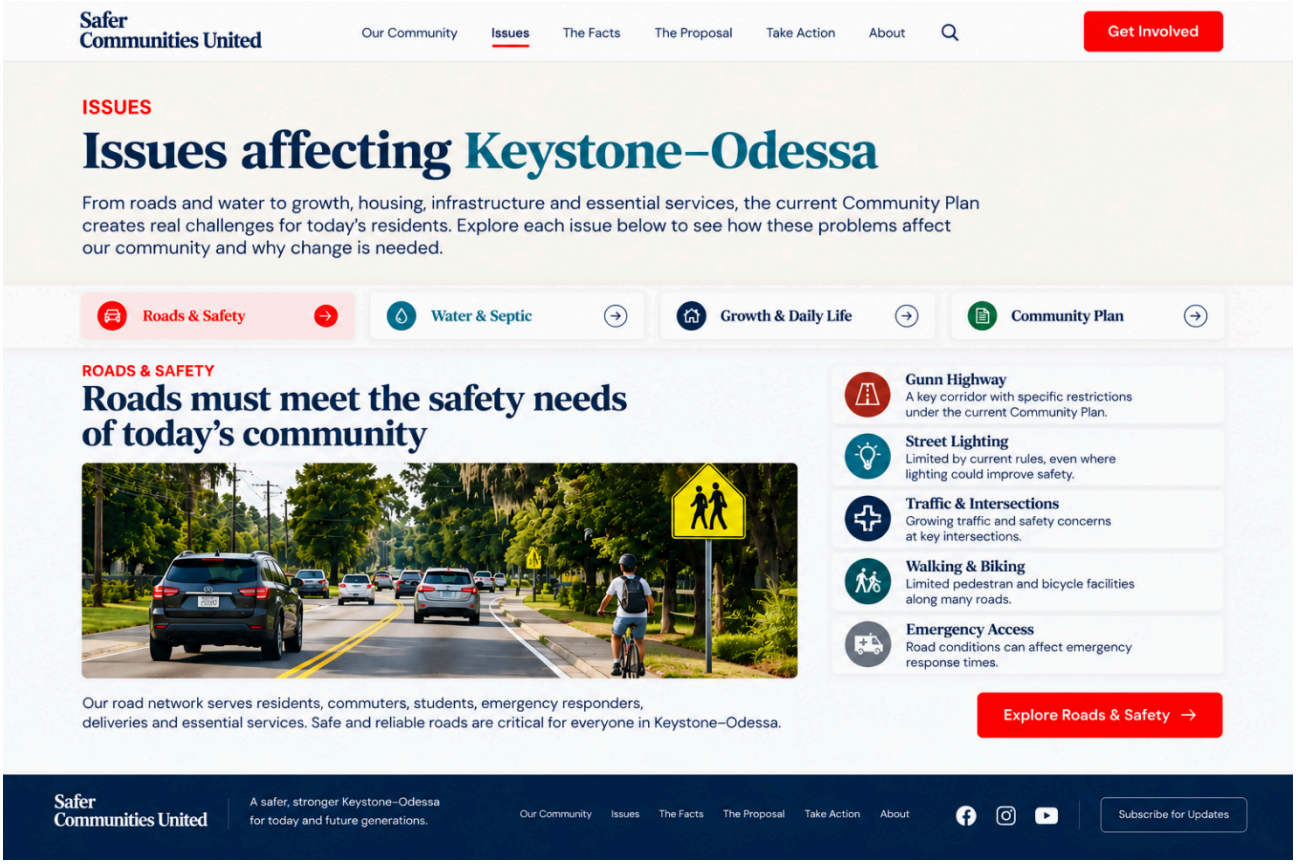
Street Lighting — Limited by current rules, even where lighting could improve safety.

Traffic & Intersections — Growing traffic and safety concerns at key intersections.

Walking & Biking — Limited pedestrian and bicycle facilities along many roads.

Emergency Access — Road conditions can affect emergency response times.

Our road network serves residents, commuters, students, emergency responders, deliveries and essential services. Safe and reliable roads are critical for everyone in Keystone–Odessa.



GROUP 02 — WATER & SEPTIC

Heading

WHAT ARE WE PROTECTING IF WE DON'T PUT CLEAN WATER FIRST?

Main Content

Private wells. Septic systems. Lakes. Wetlands. The water beneath our homes matters far more than a planning label. Protecting Keystone–Odessa should mean protecting the people who live here, not treating its Community Plan as untouchable.

Specific Issues

Septic Concentration

Data shows that a large number of properties in the Odessa area use or are likely to use septic systems.

Septic Repairs

County records show many cases involving septic system construction/repair in the area.

Private Wells

Many households depend on private wells for their household water supply.

Groundwater

Septic systems, wells, and soil conditions are directly connected to groundwater protection.

Wellfields, Lakes, and Wetlands

Keystone–Odessa is located in an environment with many sensitive water resources that need to be protected during the planning process.

Water and Wastewater Infrastructure

Specific Community Plan rules affect some options for expanding or using centralized water and wastewater systems.

Key Data

7,191 records analyzed

3,087 properties in the three septic groups

806 septic construction/repair records

Visual

A septic/wells map combined with images of water resources, wells, and septic systems.

Closing below illustration

KEEP WHAT MAKES KEYSTONE–ODESSA SPECIAL. CHANGE THE PLAN THAT SHAPES ITS FUTURE.

Petition connection

Our petition calls for removing the Keystone–Odessa Community Plan and relying on the County's broader planning framework. Our priority: health, safety and welfare.

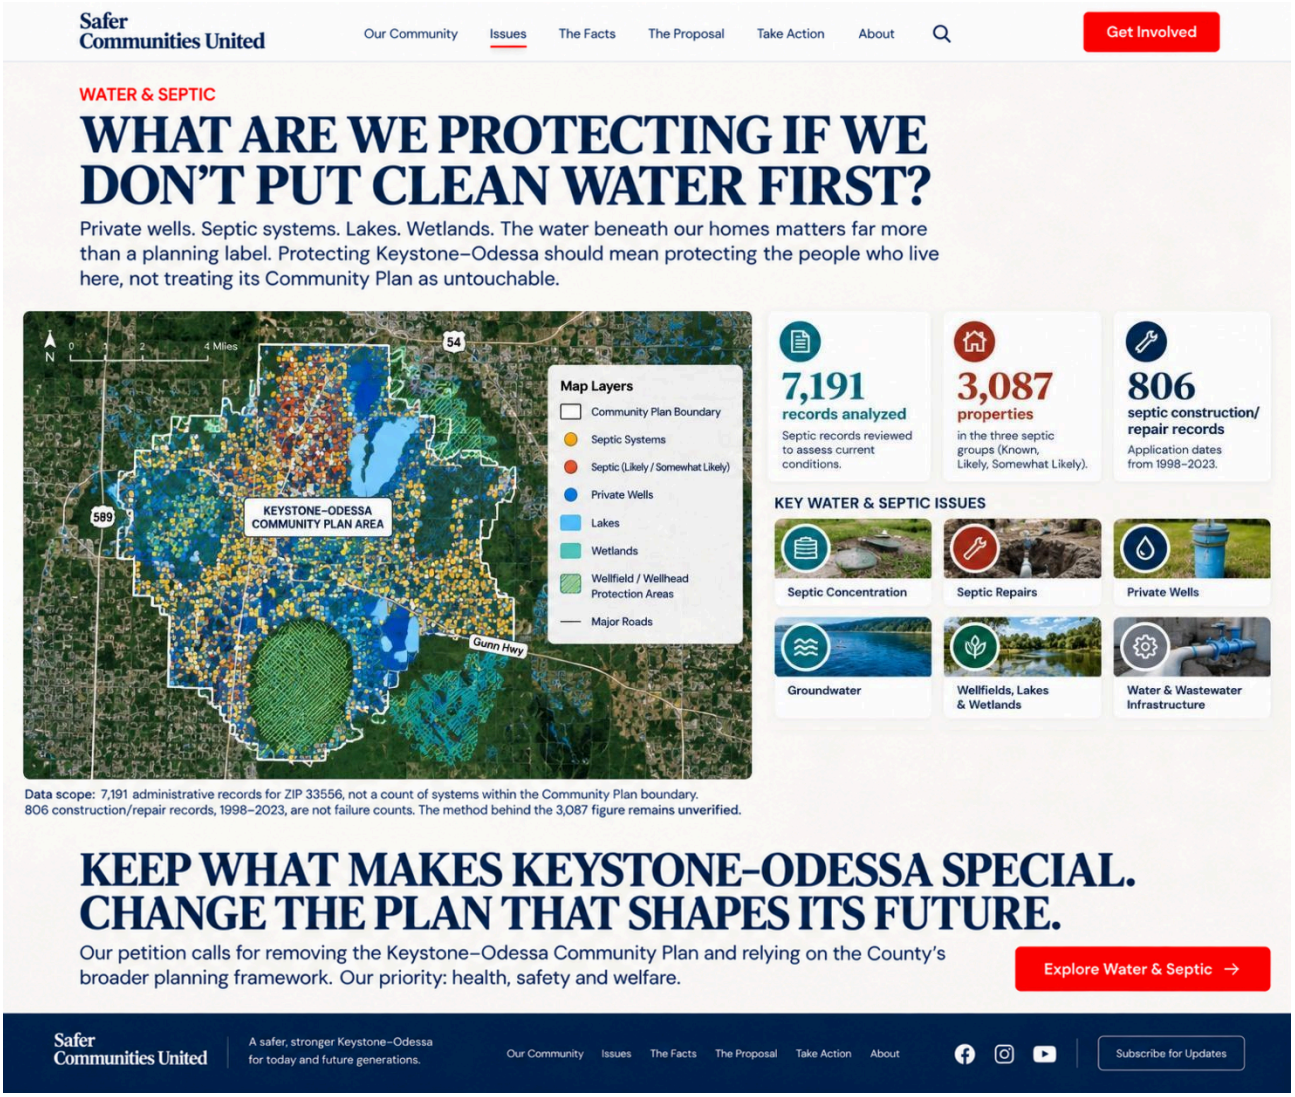
Button

Explore Water & Septic →

Current on-screen copy for the selected image

Data scope: 7,191 administrative records for ZIP 33556, not a count of systems within the Community Plan boundary. 806 construction/repair records, 1998–2023, are not failure counts. The method behind the 3,087 figure remains unverified.

Selected image — Water & Septic overview



---

5. GROUP 03 — EVERYDAY NEEDS, GROWTH & INFRASTRUCTURE

Heading

YOU CHOSE RURAL LIVING. SHOULD THAT MEAN COMPROMISING ON SAFETY?

Main Content

A longer drive for groceries may be a choice you're happy to make. But protecting rural character should never be an excuse to dismiss safe roads, essential services or responsible infrastructure. Loving Keystone–Odessa does not mean treating its Community Plan as untouchable.

Three prominent messages

THE QUESTION ISN'T HOW FAR YOU DRIVE. IT'S HOW SAFELY YOU GET THERE.

Distance alone tells only part of the story. Road conditions, crossings, lighting and safe connections matter too.

ESSENTIAL SERVICES ARE MORE THAN SHOPPING CONVENIENCE.

Healthcare, childcare and everyday necessities belong in the discussion about a community's future. A rural setting does not make those needs disappear.

PROTECT THE COUNTRYSIDE. DON’T TREAT THE PLAN AS SACRED.

A planning document is a policy choice. Supporting the landscape does not require supporting every restriction written into that document.

Petition connection

We want the Keystone–Odessa Community Plan retired. Our priority is a planning framework that puts health, safety and welfare at the centre of decisions about our community.

Visual direction

Retain the existing campaign logo, navy/red palette, navigation, footer and map illustration. Replace the seven issue cards and visual impact chain with the three messages above. Label the map “Illustration” and “Schematic service pins, not verified locations.” Allow additional page height for readable copy.

Editorial verification before publication

An evidence box may be added only after verifying the exact Community Plan restriction and a documented consequence. Keep this as an editorial note; do not display an unverified claim as public proof. Do not imply delayed emergency response, denied medical care or guaranteed outcomes from retiring the Plan.

Button

Explore Growth & Daily Life

Selected image — Everyday Needs, Growth & Infrastructure

---

6. GROUP 04 — OUTDATED COMMUNITY PLAN

Heading

The Community Plan was created for a Keystone–Odessa of more than two decades ago

Main Content

The Keystone–Odessa Community Plan was adopted in 2001 and continues to place a specific policy layer over the area.

During that time, the community's population, traffic, infrastructure needs, development conditions, and everyday needs have changed.

Timeline

2001 — COMMUNITY PLAN

The Community Plan was adopted.

↓

TODAY — MORE THAN TWO DECADES LATER

The community's population, traffic, infrastructure needs, development conditions, and everyday needs have changed.

↓

2026 — CURRENT STATUS

According to the public-record response, the BOCC had not requested the Planning Commission to complete a new update to the Keystone–Odessa Community Plan.

Areas Affected by This Policy Layer

Roads & Transportation

Rules related to road expansion, lighting, and transportation characteristics.

Water & Wastewater

Rules and exceptions related to water and wastewater infrastructure.

Growth & Housing

Specific requirements related to density, lot size, and development.

Infrastructure & Services

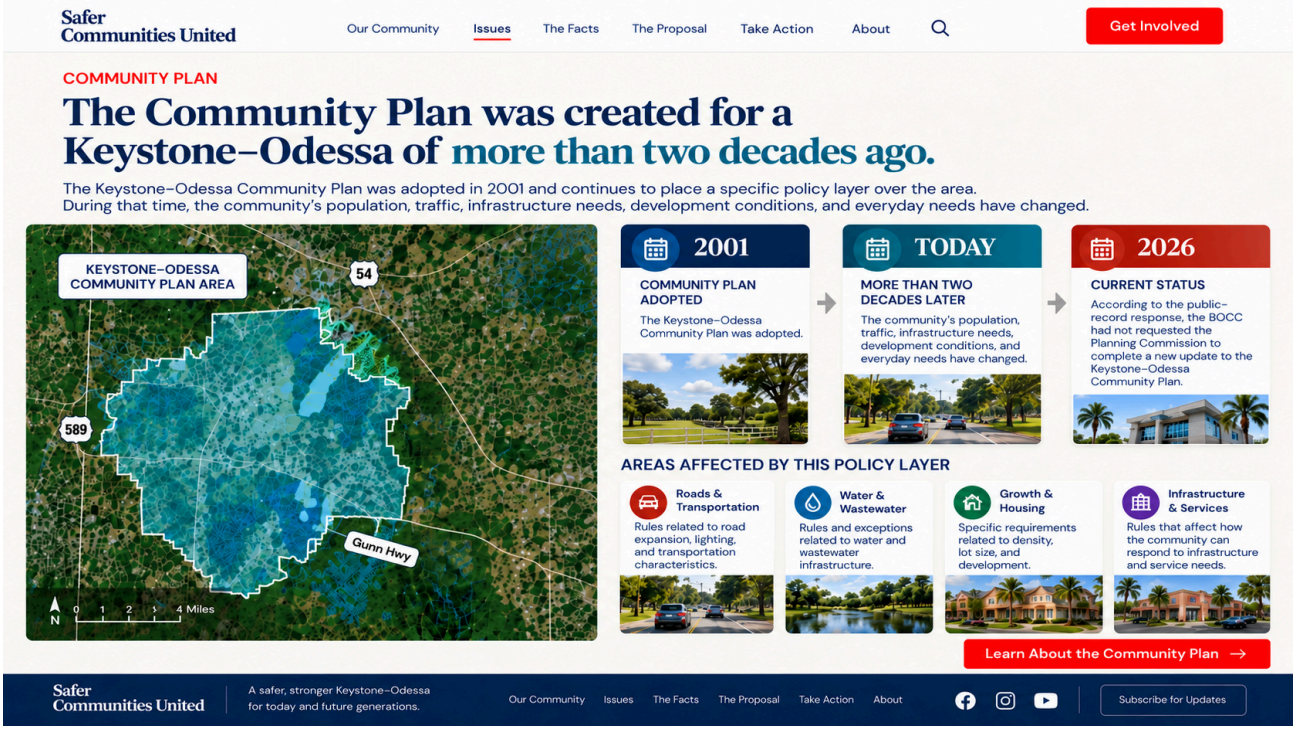
Rules that affect how the community can respond to infrastructure and service needs.

Visual

Community Plan + boundary map + timeline 2001 → TODAY — MORE THAN TWO DECADES LATER → 2026.

Button

Learn About the Community Plan →



---

7. THE ISSUES ARE CONNECTED

Heading

NO PLAN IS MORE IMPORTANT THAN THE PEOPLE IT SERVES.

Your roads. Your water. Your daily life. The Keystone–Odessa Community Plan influences decisions across all three. A document with that much influence should earn its place by serving the community, not remain beyond question.

Diagram

Place “ONE PLAN. DECISIONS THAT REACH INTO EVERYDAY LIFE.” in the center.

From the center, divide into three main branches:

ROADS & SAFETY

Road Rules

WHAT GOOD IS RURAL CHARACTER WITHOUT SAFE WAYS TO GET AROUND?

Lighting, crossings, road improvements and reliable access belong at the heart of planning for people.

↓

Traffic · Lighting · Ability to Improve Roads

↓

Safety · Mobility · Emergency Access

WATER & SEPTIC

Water & Wastewater Rules

ARE WE PROTECTING OUR WATER—OR DEFENDING A SET OF RULES?

Water and wastewater policies should be judged by how well they protect people and the environment.

↓

Septic · Wells · Groundwater · Wellfield

↓

Health · Water Resources · Environment

GROWTH & DAILY LIFE

Land Use & Development Rules

SHOULD PEOPLE HAVE TO FIT THE PLAN, OR SHOULD THE PLAN SERVE PEOPLE?

Housing, infrastructure and access to essential services shape everyday life. Those needs deserve more than a rural label.

↓

Housing · Infrastructure · Service Locations · Travel Distance

↓

Access · Quality of Life · Welfare

Final Convergence Point

HEALTH. SAFETY. WELFARE. THESE SHOULD BE THE PRIORITIES.

Show the three policy areas within one planning system. The illustration connects policy topics and priorities; it does not establish that the Plan caused harm.

We believe Keystone–Odessa needs a different planning approach. Sign the petition to retire the Community Plan and put health, safety and welfare at the centre of the County's decisions.

Implementation note: add one source link per column to the relevant documented restriction or decision after checking that the source directly supports it. Roads, water and growth links still need a source check; do not present the diagram as proof of harm.

Selected image — The Issues Are Connected

PAGE 03 — ROADS & SAFETY

1. PURPOSE

This page explains the road and safety issues in Keystone–Odessa, showing:

- The traffic and safety conditions that are affecting the community.
- What the Community Plan says about roads, road expansion, and lighting.
- Who these roads serve beyond the residents living within the Community Plan boundary.
- What the data, maps, and official records show.
- How the Hillsborough County Comprehensive Plan approaches transportation safety and infrastructure.

---

2. INTRODUCTION

Label

ROADS & SAFETY

Heading

Our roads must be safe for everyone.

Content

The road network in Keystone–Odessa serves residents, commuters, students, businesses, emergency services, and people traveling between nearby areas.

The specific rules of the Community Plan affect how roads, lighting, and transportation improvements can be planned to respond to current conditions.

Four Key Issues

Traffic · Lighting · Road Safety · Emergency Access

Visual

Large photo of Gunn Highway or an actual road in Keystone–Odessa.

Prioritize an image that shows all of these at the same time:

Traffic + two-lane road characteristics + residential areas + road users

Button

View the Road Issues ↓

---

3. MAIN SAFETY ISSUES

Display 4 large cards.

01 — STREET LIGHTING

Does someone have to get hurt first? The Community Plan takes a restrictive approach to street lighting and allows lighting when public safety is at risk.

Source: Livable Communities Element. Livable Communities compilation dated June 26, 2026. Effective dates: p. 3. County framework relationship: pp. 4–5. Keystone–Odessa: pp. 17–27. Transportation and lighting: p. 24.

Read the Community Plan

FHWA explains that modern lighting can precisely target where light is needed while minimizing spill into the night sky and neighboring properties. Rural character should drive better design, not end the safety discussion.

Source: Federal Highway Administration Lighting safety countermeasure. FHWA-SA-21-050, Applications and Considerations. Modern lighting control and reduced spill; general engineering guidance.

Read FHWA guidance on lighting

Image: Local road at night.

Current on-screen copy for the selected image

Street lighting should respond to public safety needs.

ACTUAL SAFETY NEEDS

Adequate street lighting is important for:

Visibility for drivers

Intersections and high-risk areas

Pedestrians and cyclists

Night travel and daily commutes

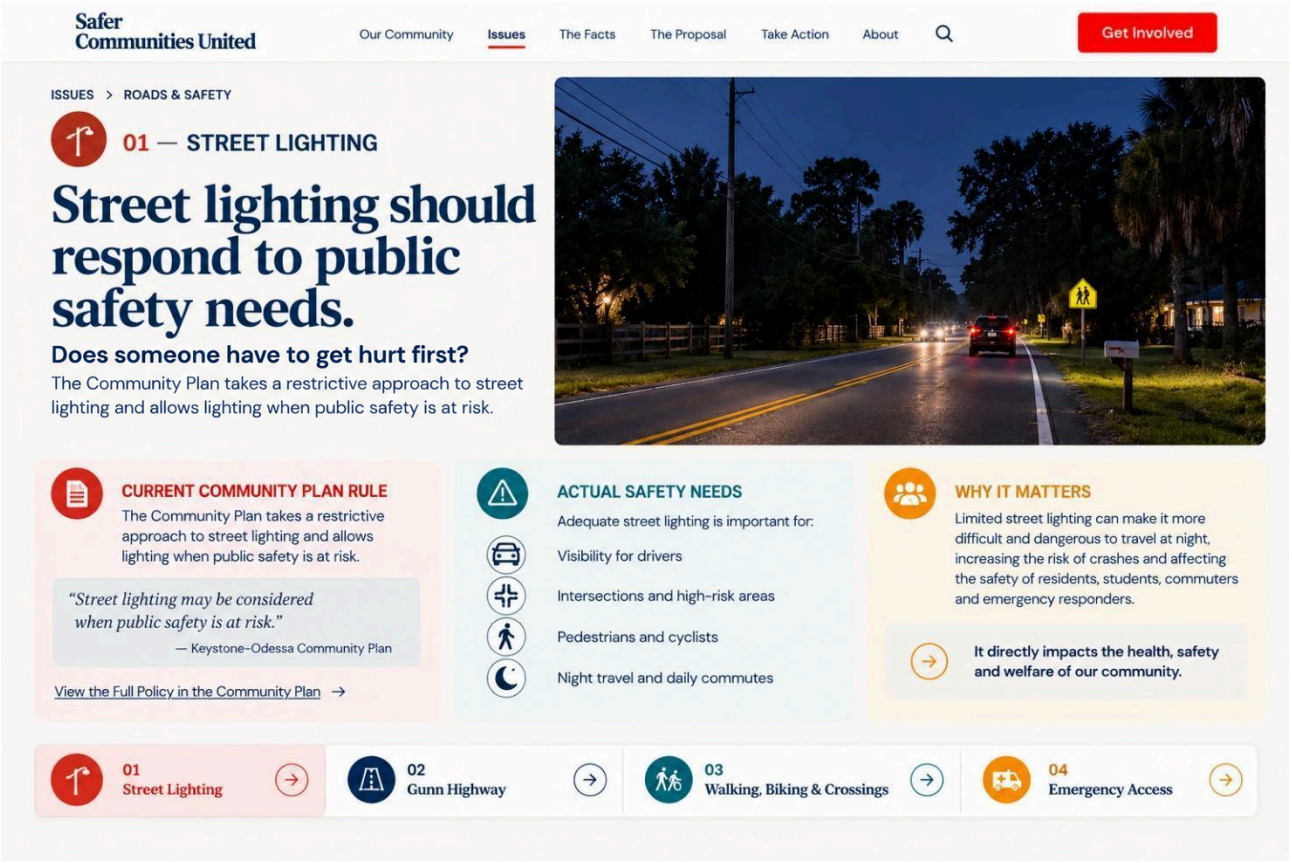
WHY IT MATTERS

Limited street lighting can make it more difficult and dangerous to travel at night, increasing the risk of crashes and affecting the safety of residents, students, commuters and emergency responders.

It directly impacts the health, safety and welfare of our community.

Additional text shown in the selected image: “Street lighting may be considered when public safety is at risk.”

Selected image — Street Lighting



02 — GUNN HIGHWAY

On-screen heading: Expansion of Gunn Highway is restricted.

The Community Plan identifies Gunn Highway as a road with expansion restrictions; the County's constrained-road table also references the Community Plan for the section from South Mobley Road to Pasco County.

19,912 DAILY VEHICLE MOVEMENTS. TWO LANES. The County's 2024 data put Gunn Highway from the Pasco County line to Van Dyke Road at 19,912 annual-average daily vehicle movements. Both daily and peak-direction service are rated E against a D standard. These figures demand a serious response.

Source: County 2024 level-of-service traffic sections. County 2024 traffic layer. OBJECTID 582: Gunn Highway, Pasco County line to Van Dyke Road, AADT 19,912. OBJECTID 136: Van Dyke Road, Gunn Highway to Suncoast north ramp, AADT 17,500. Both have two lanes, daily and peak-direction LOS E, and standard D.

Read the County's 2024 traffic data

Image: Gunn Highway + route map.

Current on-screen copy for the selected image

The Community Plan identifies Gunn Highway as a road with restrictions on further expansion.

COMMUNITY PLAN RULE

Gunn Highway cannot be widened further.

View the Community Plan Policy →

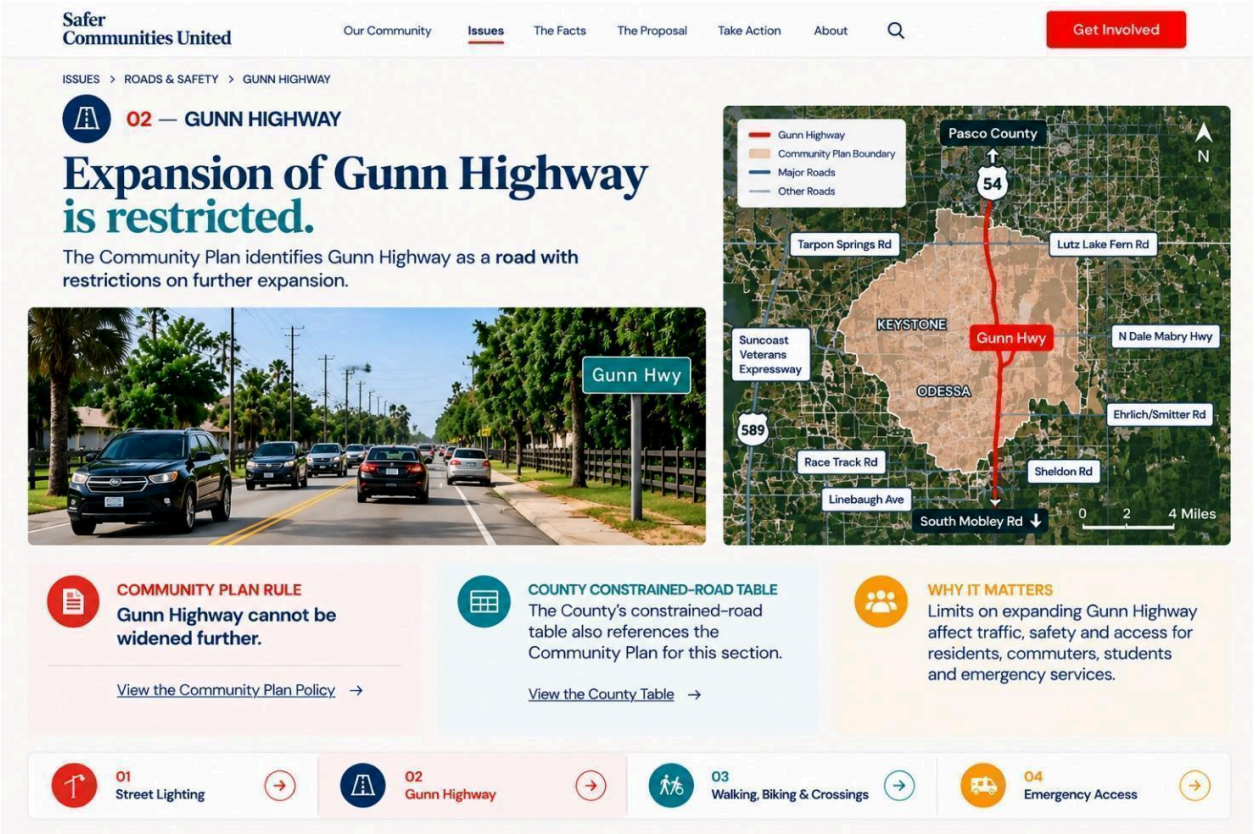
COUNTY CONSTRAINED-ROAD TABLE

The County's constrained-road table also references the Community Plan for this section.

View the County Table →

WHY IT MATTERS

Limits on expanding Gunn Highway affect traffic, safety and access for residents, commuters, students and emergency services.



03 — WALKING, BIKING & CROSSINGS

On-screen heading: Pedestrians and cyclists face safety risks.

The safety of pedestrians, cyclists, and people crossing the road needs to be considered together with traffic, speed, crossings, and the actual conditions on each corridor.

The Community Plan includes content about pedestrian/equestrian crossings, traffic controls, trails, and bikeways.

SAFE WALKING SHOULD NOT BE AN EXCEPTION. County Mobility Objective 2.2 calls for protecting pedestrians, children, seniors and people with disabilities. FHWA recommends connected walking routes without gaps. A safe route matters whether you are going to school, visiting a neighbor or using a wheelchair.

Sources: County Comprehensive Plan, Mobility Objective 2.2 and Policies 2.2.1–2.2.7, p. 127; FHWA Walkways, FHWA-SA-21-047, connected routes and accessibility.

Read the County policy and full criteria

Read FHWA guidance on walkways

Image: Road with a shoulder/pedestrian or crossing point.

Current on-screen copy for the selected image

COMMUNITY PLAN RULE

Includes pedestrian/equestrian crossings, traffic controls, trails and bikeways.

ACTUAL CONDITIONS

Traffic and higher speeds

Limited pedestrian and bicycle facilities

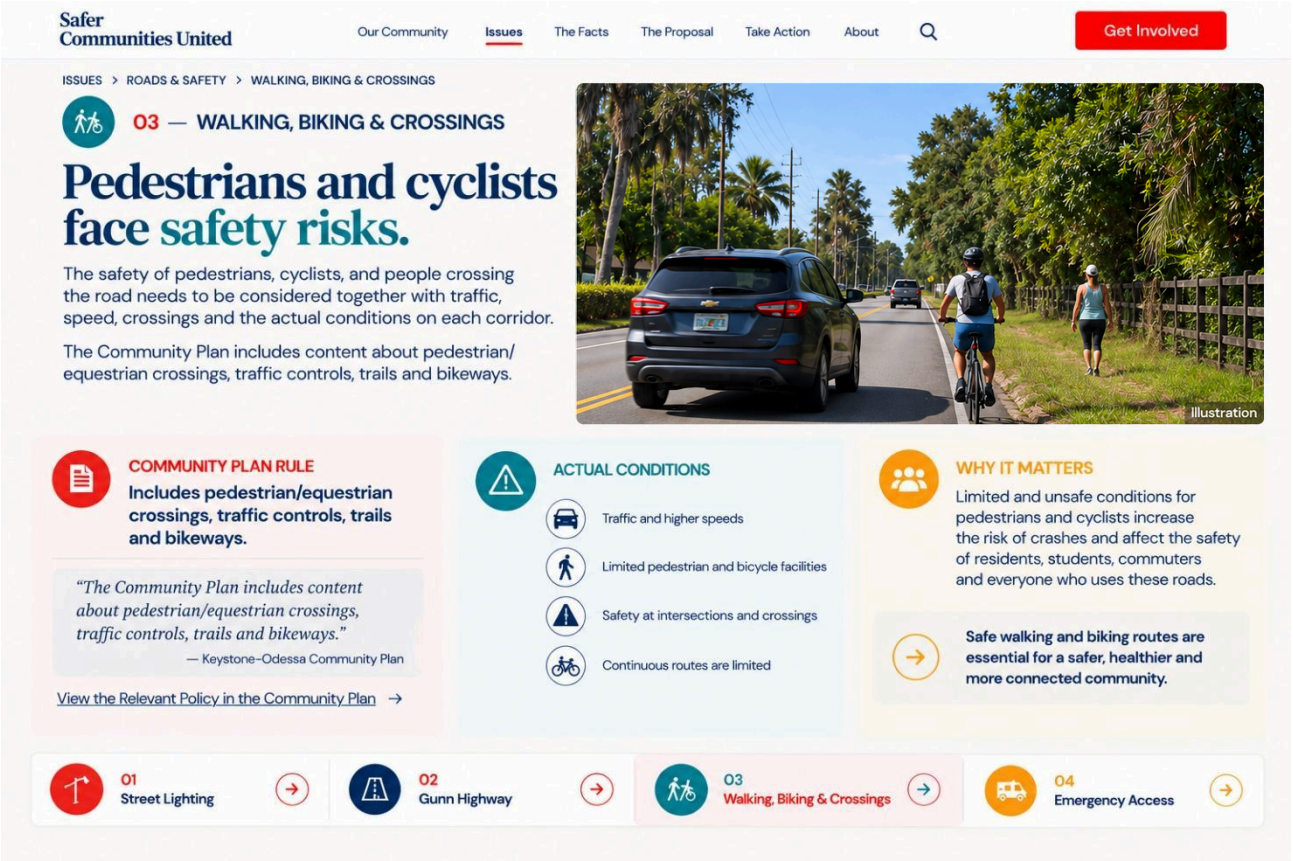
Safety at intersections and crossings

Continuous routes are limited

WHY IT MATTERS

Limited and unsafe conditions for pedestrians and cyclists increase the risk of crashes and affect the safety of residents, students, commuters and everyone who uses these roads.

Safe walking and biking routes are essential for a safer, healthier and more connected community.



04 — EMERGENCY ACCESS

On-screen heading: Emergency access must be reliable.

The road network serves ambulances, fire services, police, and emergency travel. Access and travel time need to be considered in decisions about road infrastructure.

Image: Emergency vehicle on a local road.

Current on-screen copy for the selected image

COMMUNITY PLAN RULE

The Community Plan includes content about emergency access as part of transportation and roadway policies.

KEY FACTORS

Emergency response time

Intersections and road design

Congestion and delays

Road conditions

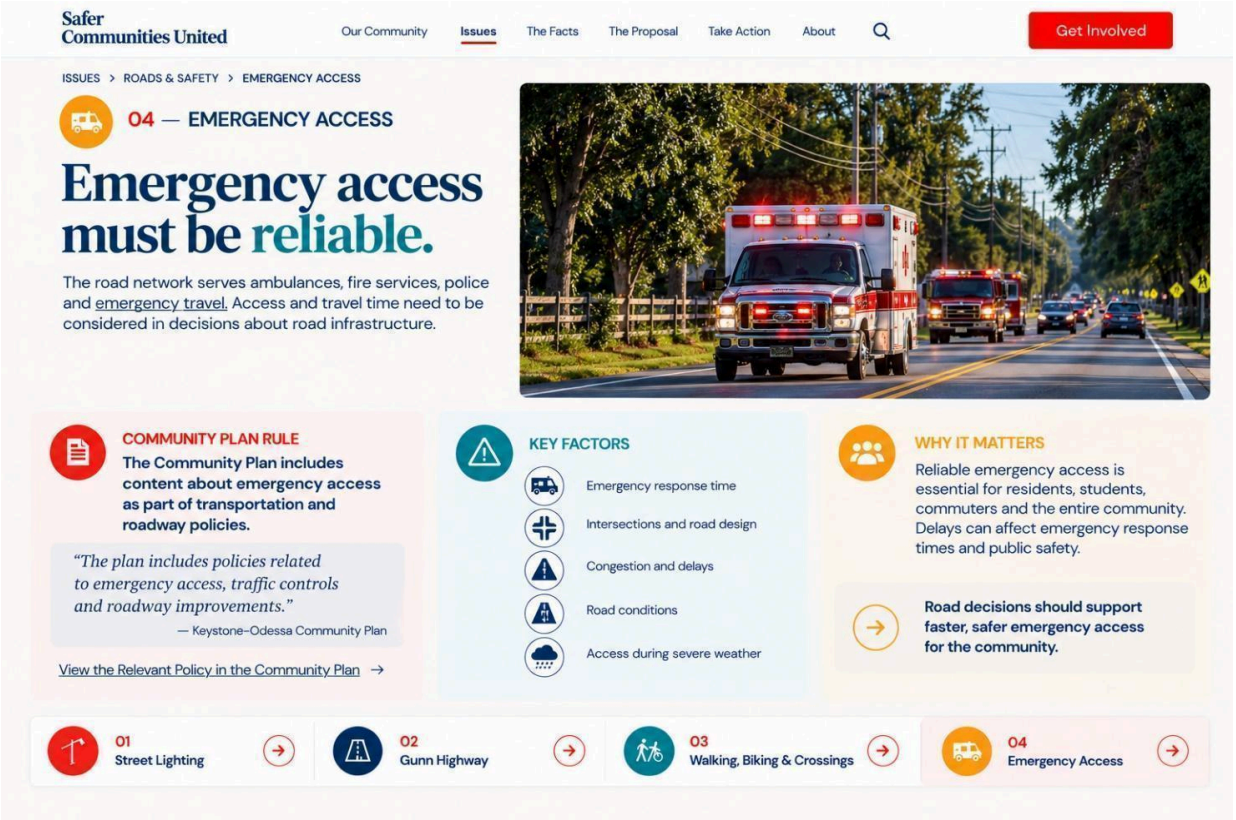
Access during severe weather

WHY IT MATTERS

Reliable emergency access is essential for residents, students, commuters and the entire community. Delays can affect emergency response times and public safety.

Road decisions should support faster, safer emergency access for the community.

Additional text shown in the selected image: “The plan includes policies related to emergency access, traffic controls and roadway improvements.”



4. THE NIMBY MAP VS. THE ACTUAL MAP

Heading

The NIMBY Map does not show the full transportation reality.

Content

The NIMBY Map focuses on the Keystone–Odessa Community Plan boundary.

The Actual Map shows the real road network extending beyond that boundary and serving residents, commuters, students, workers, emergency responders, deliveries, and people traveling through the area.

The NIMBY Map

Shows the Community Plan boundary.

It presents Keystone–Odessa mainly as an isolated planning area.

The Actual Map

Shows how the road network actually functions.

Major roads connect Keystone–Odessa with surrounding communities and serve people far beyond the Community Plan boundary.

Key Message

Road safety and transportation decisions affect more than the people living inside the Community Plan boundary.

Visual

Link to Home section 2A for the official map, area map and roads map. Use the same stacked, full-width layout here if repeated:

Over one-third of the Keystone–Odessa Community Plan area is mapped conservation land, lakes, reservoirs or ponds.

GIS measurement, 16 October 2026: 34.3% (8,025 of 23,387 acres); conservation land and mapped lakes/reservoirs/ponds clipped to the adopted Plan boundary, with overlaps counted once. Sources: Plan Hillsborough; FNAI (September 2026); acquired ELAPP; SWFWMD (2023).

Demo: retain the selected static Records & Evidence design. Label the mockup's 327 crashes and 12 serious/fatal crashes as unverified examples, not established local evidence. ((Later: build the interactive safety-data view from verified local crash counts, dates and spatial findings; verify the example figures before any public use.))

---

7. HOW DO THE COMMUNITY PLAN AND COMPREHENSIVE PLAN APPROACH THE ISSUE?

This is where the comparison begins on this page.

Heading

Two planning frameworks. Two approaches to roads and safety.

Two Columns

KEYSTONE–ODESSA COMMUNITY PLAN

Focuses on area-specific rules:

- Rural road characteristics.

Should a rural appearance come before people's daily needs? The plan prioritizes two-lane rural roads and limits changes that increase capacity or urbanize the area.

- Road configuration.

Why limit the options before assessing what people need? The plan identifies preferred road configurations, including two-lane rural sections, and the types of improvements considered appropriate for the area.

- Gunn Highway.

How much traffic is enough to reconsider the restrictions? Gunn Highway is identified as a road with restrictions on further expansion and included in the constrained-road tables.

- Lighting.

Does someone have to get hurt first? The plan allows lighting when public safety is at risk. Identify the danger. Act before someone is injured.

- Identified types of transportation improvements.

Should a safety improvement have to pass a rural-character test? The plan allows intersection, cycling, walking and traffic-control improvements while requiring rural character to be maintained.

↔

HILLSBOROUGH COUNTY COMPREHENSIVE PLAN

Focuses on related countywide policies:

- Transportation safety.
- Mobility.
- Infrastructure needs.
- Evaluation of conditions and the network.
- Broader transportation planning tools.

A ROAD RESTRICTION IS NOT A PERMANENT ANSWER. County Mobility Policy 5.1.4 calls for the constrained-road list to be reevaluated before each long-range transportation plan update, balancing community preservation, safety and growing traffic congestion. Put Gunn Highway's restriction back under serious public scrutiny.

Source: County Comprehensive Plan One Water and Mobility. County compilation dated June 26, 2026. One Water 4.3.2–4.3.7: pp. 229–234. Mobility 5.1.2–5.1.4: p. 135. Constrained roads: pp. 250–251.

This section only provides a comparison summary. The analysis of each policy is on the Comparison Page.

Button

Detailed Roads & Safety Comparison →

Current on-screen copy for the selected image

Both plans address roads and safety, but they take different approaches. The Community Plan sets area-specific rules for Keystone–Odessa, while the Comprehensive Plan provides countywide policies.

Transportation safety — Includes countywide policies to improve transportation safety, reduce crashes, and address safety for all users, including drivers, pedestrians and cyclists. (Mobility Element)

Mobility — Supports a connected and functional multimodal network, including roadways, transit, bicycle and pedestrian facilities. (Mobility Element)

Infrastructure needs — Addresses transportation infrastructure needs based on current and future conditions, including roadway capacity, intersection improvements and system performance. (Mobility Element)

Evaluation of conditions — Uses data, level-of-service standards and network evaluation to identify needed improvements across the county. (Mobility Element)

Planning tools — Provides broader transportation planning tools, such as the Cost Feasible Plan, the Transportation Improvement Program (TIP) and coordination with the Long Range Transportation Plan (LRTP). (Mobility Element)

This is a summary comparison. The detailed analysis of each policy, with side-by-side excerpts from both plans, is on the Comparison Page.

PAGE 04 — WATER & SEPTIC

1. PAGE PURPOSE

This page shows that the way the Keystone–Odessa Community Plan addresses water and wastewater is limiting the solutions that can be used to protect water resources and respond to septic-related issues.

Visitors need to understand a very clear chain:

Keystone–Odessa depends heavily on wells and septic → data shows that septic is present on a significant scale and there are many repair records → at the same time, this area has water resources that need to be protected → the Community Plan places limits on water/wastewater infrastructure → some Countywide tools for responding to septic concentration, environmental conditions, and wellfield/wellhead protection do not apply in the same way in Keystone–Odessa.

---

2. HERO — THE CORE ISSUE

Label

WATER & SEPTIC

Heading

Protect our water. Open the door to better solutions.

Keystone–Odessa depends heavily on private wells and septic. This affects the ability to use some Countywide solutions when the community faces septic concentration, environmental conditions, and the need to protect water resources.

Visual

A wide view of Keystone–Odessa combined with the diagram:

Septic → Groundwater → Private Wells

with the Community Plan boundary in the background.

CTA

View the Issue ↓

Current on-screen copy for the selected image

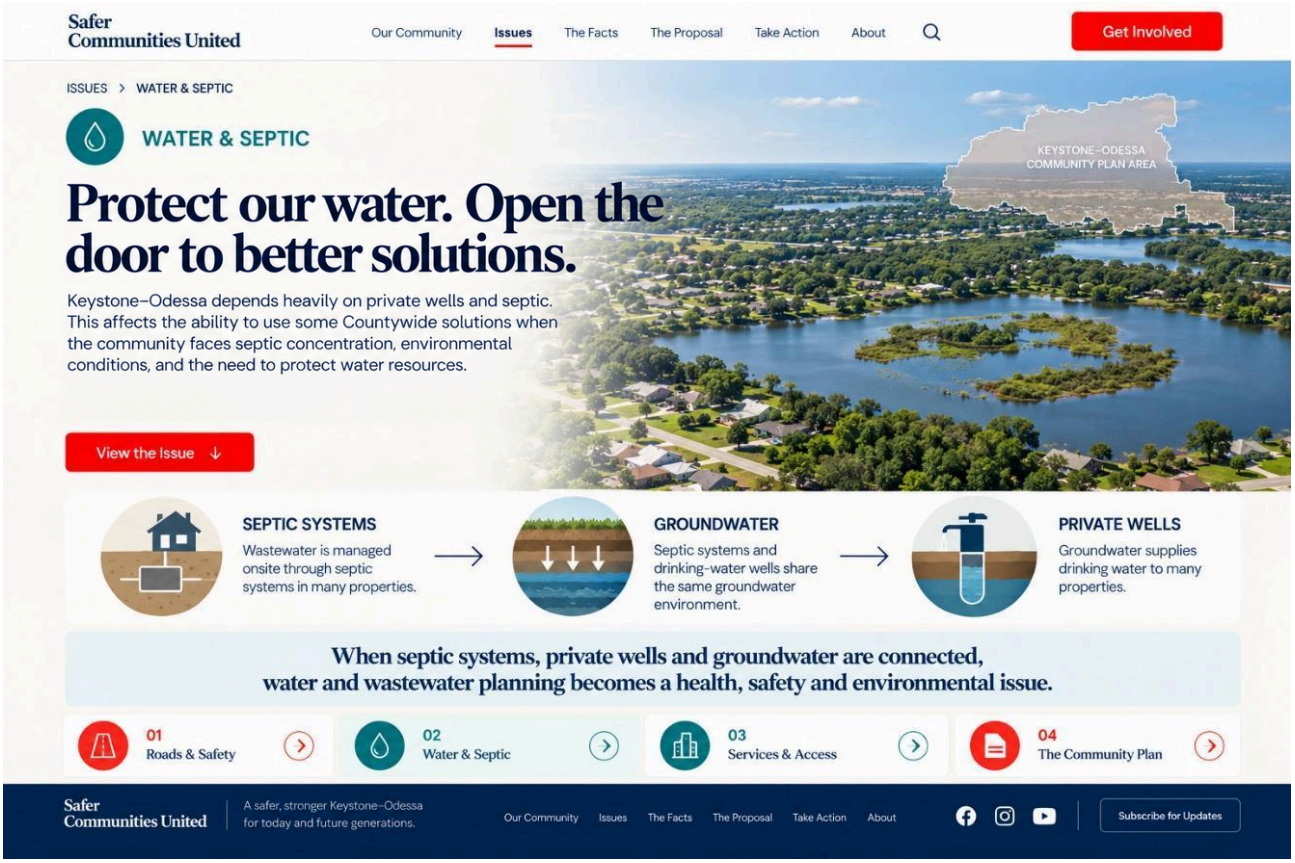
SEPTIC SYSTEMS — Wastewater is managed onsite through septic systems in many properties.

GROUNDWATER — Septic systems and drinking-water wells share the same groundwater environment.

PRIVATE WELLS — Groundwater supplies drinking water to many properties.

When septic systems, private wells and groundwater are connected, water and wastewater planning becomes a health, safety and environmental issue.

Selected image — Water & Septic hero



---

3. THE SCALE OF SEPTIC IS NOT A SMALL ISSUE

Thousands of records in Odessa are classified as septic-related.

Use the data as the main focus at the beginning of the page:

7,191 total records | 1,626 Known Septic | 1,210 Likely Septic | 251 Somewhat Likely Septic

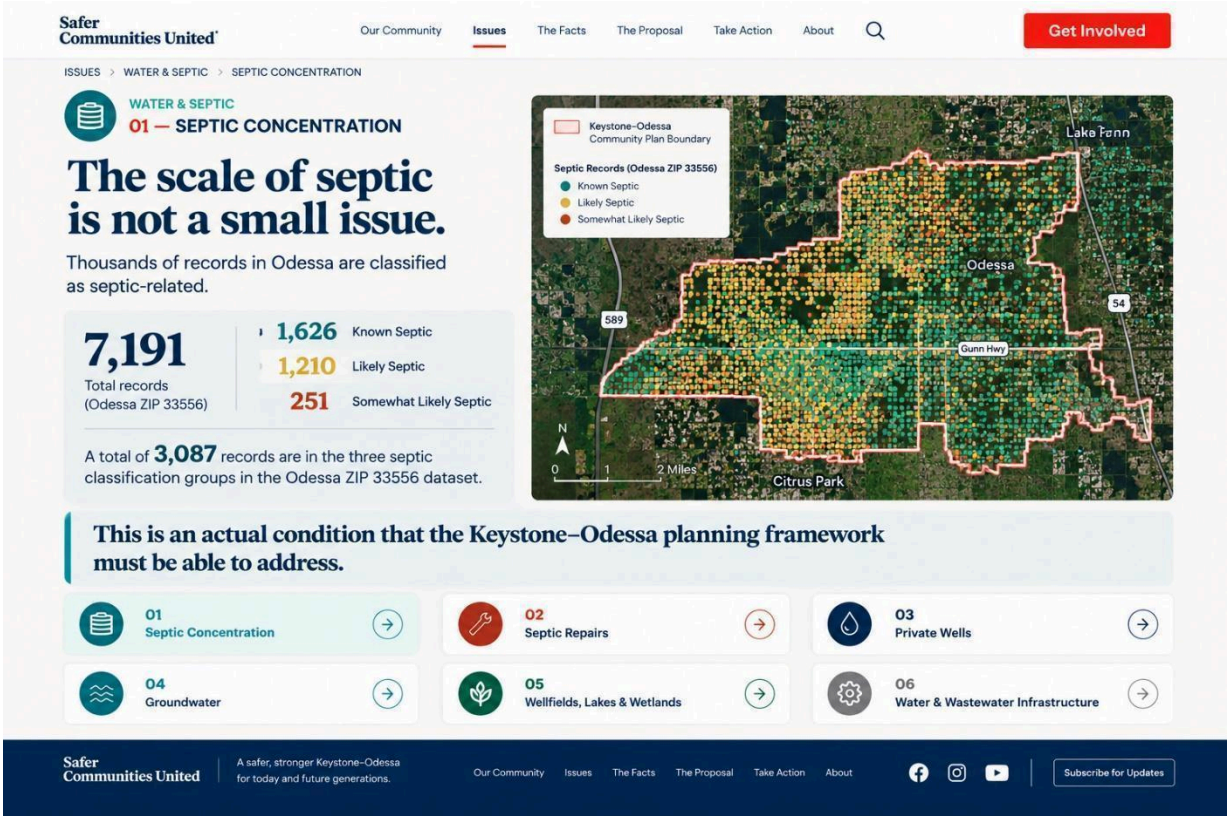
A total of 3,087 records are in the three septic classification groups in the Odessa ZIP 33556 dataset.

Visual

On the left are the large numbers. On the right is a map showing the distribution of septic records, with the Community Plan boundary overlaid.

Final Message of the Section

This is an actual condition that the Keystone–Odessa planning framework must be able to address.



4. SEPTIC SYSTEMS HAVE NEEDED REPAIRS FOR MANY YEARS

806 repair records show that this is an issue that has continued over time.

The dataset contains 806 EHDConst–Repair records, including 738 Known Septic, 41 Likely Septic, and 27 Somewhat Likely Septic. Application dates range from 1998–2023.

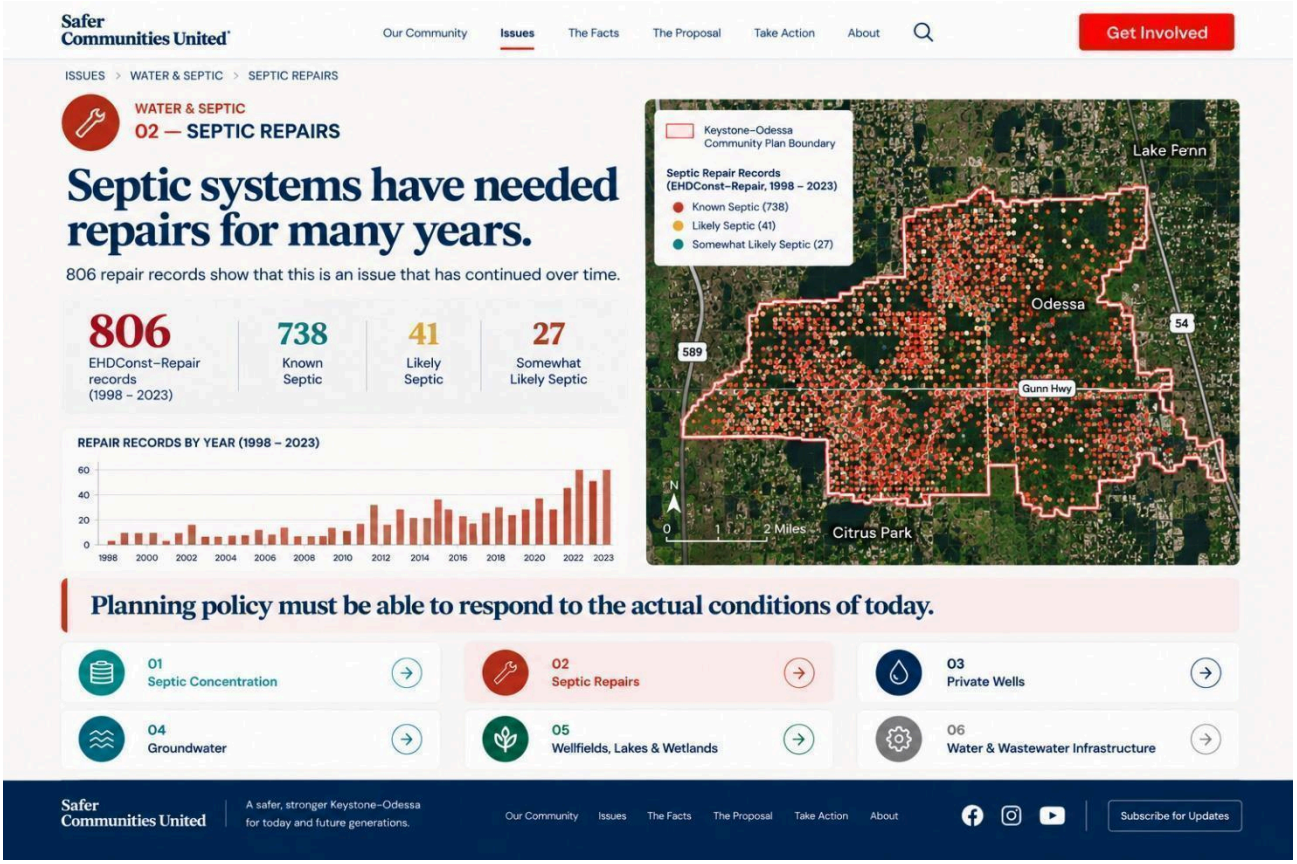
Visual

Timeline 1998 → 2023 combined with a map of repair records.

Directly below the visual, place one large sentence:

Planning policy must be able to respond to the actual conditions of today.

This section does not need a long explanation of how septic works. The purpose is to show readers the **scale + time + location**.



---

5. WHAT GOES INTO THE GROUND CAN REACH THE WATER WE RELY ON.

Private wells draw from groundwater. When septic systems fail or wastewater is inadequately treated, contaminants can reach that water. Soil conditions, the number of systems and distance to wells matter.

THE CONNECTION DOESN'T STOP AT YOUR PROPERTY LINE.

Conceptual illustration; not a documented contamination event.

WHAT GOOD IS PROTECTING A RURAL IMAGE IF WE DON'T PUT WATER PROTECTION FIRST?

Keeping Keystone–Odessa beautiful should include serious scrutiny of the rules governing water and wastewater infrastructure. No planning document should be beyond question.

PROTECT OUR WATER. RETHINK THE RULES.

Our petition calls for retiring the Community Plan and changing the related restrictions, with health, safety and welfare at the centre of County decisions.

Source: EPA — Septic Systems and Drinking Water

Main Visual

((An interactive map that allows users to turn these layers on/off:))

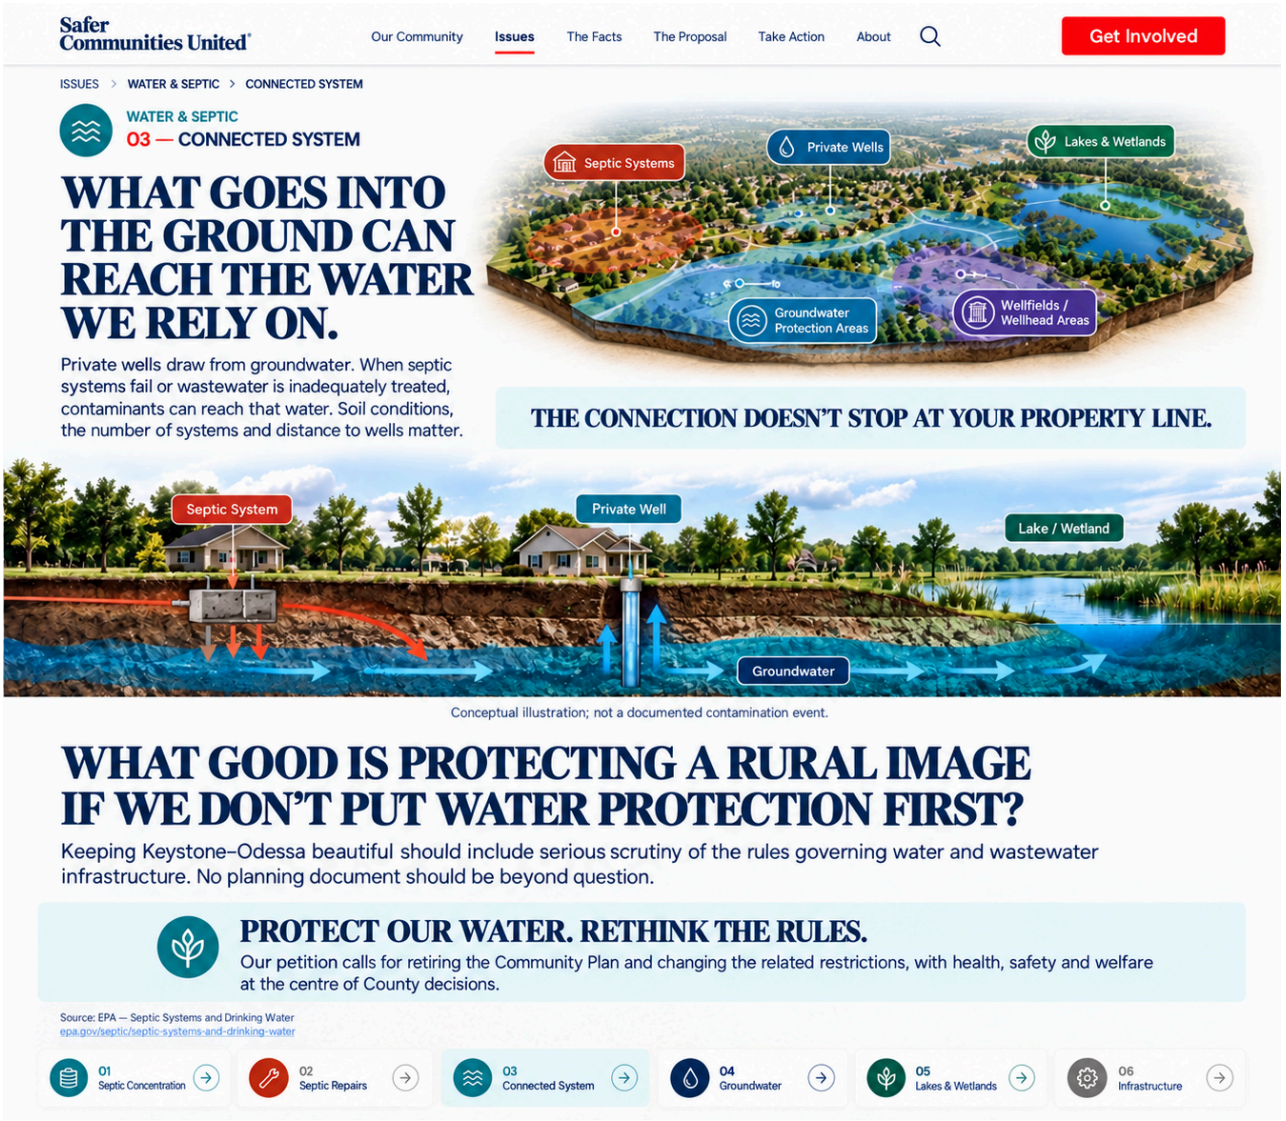
((Septic | Repair Records | Wells | Groundwater Protection | Wellhead/Wellfield | Lakes & Wetlands | Community Plan Boundary))

Demo: retain the selected connected-water conceptual cutaway. Do not build or add the interactive Water & Septic layer map now. ((Later: retain the separate interactive layer-map requirement above; the illustration does not demonstrate live map controls.))

This should be one of the strongest visual sections in Water & Septic: visitors need to be able to see that these issues exist together in the same area, instead of reading them as separate facts.

Selected image — Connected Water

((Future functionality shown in this artwork is for later. For the first demo, retain the image and use static previews or simple page links only.))



---

6. OUR WATER. FEWER OPTIONS. WHY?

This is the central section of Water & Septic.

The County has water and sewer pathways for certain environmental problems, septic concerns and water-resource protection. Keystone–Odessa is expressly excluded from several of them. Why should our community accept fewer options for addressing these needs?

THE EXCLUSIONS ARE WRITTEN INTO POLICY. One Water 4.3.7 excludes Keystone–Odessa from specified environmental, flood-prone septic and wellhead-area routes, plus the overriding-public-interest process. Read the criteria behind each route.

Source: County Comprehensive Plan One Water and Mobility. County compilation dated June 26, 2026. One Water 4.3.2–4.3.7: pp. 229–234. Mobility 5.1.2–5.1.4: p. 135. Constrained roads: pp. 250–251.

Read the County policy and full criteria

Visual

A very simple diagram:

1. REAL CONDITIONS. REAL NEEDS.

Private wells, septic systems and sensitive water resources make infrastructure choices important.

2. THE COUNTY HAS TOOLS TO RESPOND.

Specific policies allow consideration of connections for qualifying environmental and public-interest circumstances.

3. KEYSTONE–ODESSA: EXPLICITLY LEFT OUT.

Policy 4.3.7 excludes this area from several of those pathways.

4. WHY DEFEND A RESTRICTION BEFORE CONSIDERING A SOLUTION?

Preserving rural character should not put these policy choices beyond scrutiny.

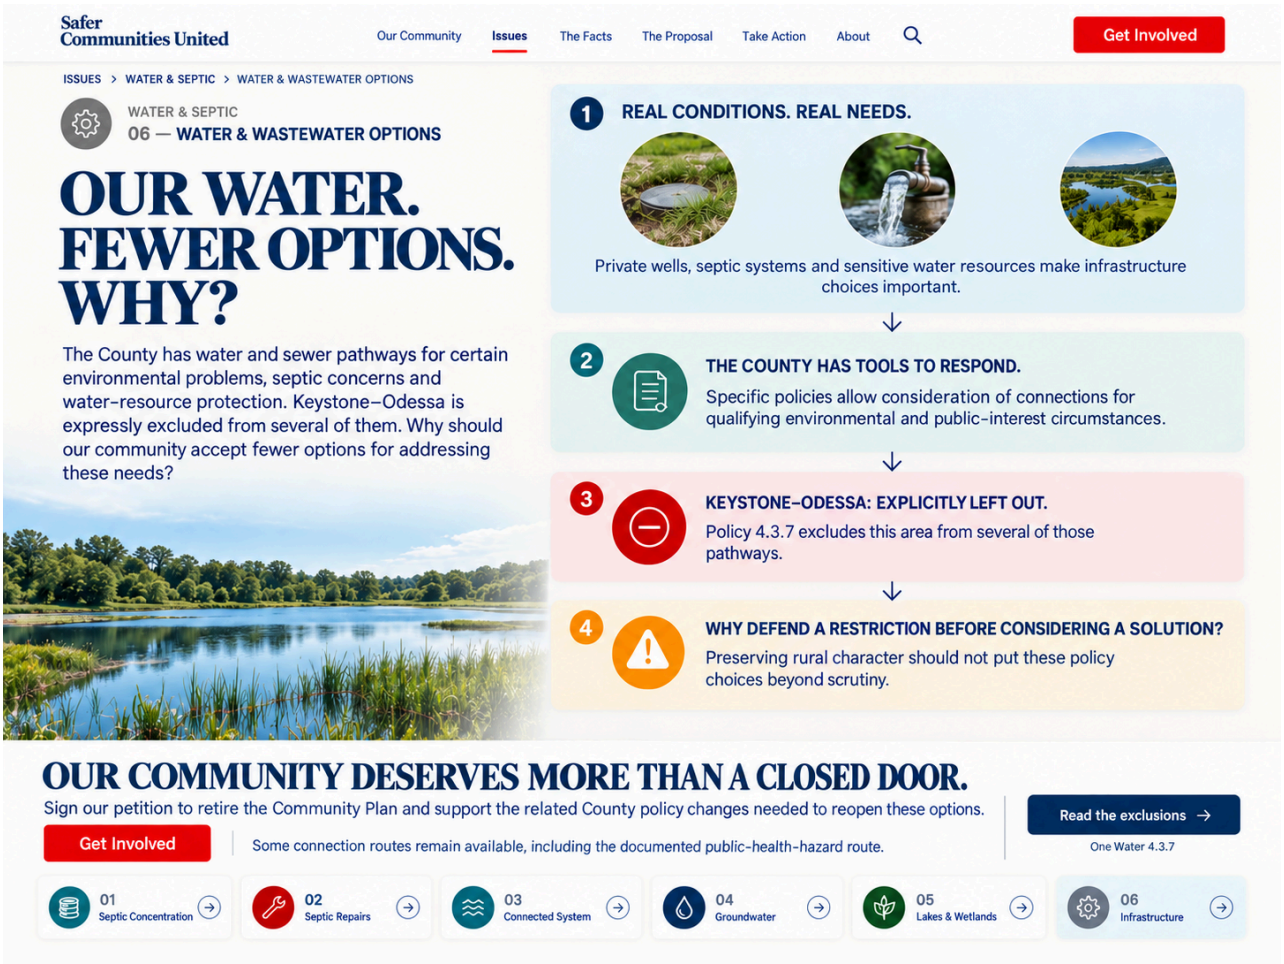
OUR COMMUNITY DESERVES MORE THAN A CLOSED DOOR.

Sign our petition to retire the Community Plan and support the related County policy changes needed to reopen these options.

Some connection routes remain available, including the documented public-health-hazard route.

Read the exclusions — One Water 4.3.7

Selected image — Water & Wastewater Options



---

7. THE CORE CONFLICT

The Community Plan places water protection as a top priority, but at the same time limits some tools that can be used to address water and wastewater issues.

This is one of the strongest comparison points in our documents: the Community Plan identifies water protection as a very high priority, but it does not provide the same pathways for septic/wastewater response as the Countywide framework in areas related to wellhead/wellfield protection.

LEFT OUT. BY CHOICE.

In 2024, the County expanded rural water and sewer options. Commissioners deliberately excluded Keystone–Odessa from several of them.

Planning staff supported consistent treatment and said safeguards addressed development concerns. Commissioners chose exclusion.

HEALTH. SAFETY. WELFARE. WHY EXCLUDE US? One excluded utility review weighs public health, safety, welfare and public benefits. Keystone–Odessa deserves suitable options considered on their merits.

Read the public-interest criteria and exclusion — Policies 4.3.5 and 4.3.7

REVERSE THE EXCLUSIONS. OPEN THE OPTIONS.

Source detail: April 8, 2024 staff report, p. 7; May 9 minutes, Book 576, pp. 39–40; One Water 4.3.5 and 4.3.7, pp. 233–234. The specified-route exclusions include a pre-existing wellhead carveout; not every exclusion originated in 2024. The separate health-hazard route remains.

Read the May 9, 2024 Board minutes — Book 576, pages 39–40

SUPPORT WENT BEYOND PLANNING STAFF. Water Resources staff supported the proposed rural reforms; Emergency Management said they aligned with mitigation goals. The Citizens Advisory Committee supported rural sewer options while preserving rural character.

Source detail: HC/CPA 23-18 adoption packet. Planning staff rationale, pp. 5–7; EPC, pp. 21–23; Water Resources and Emergency Management, pp. 28–29; Citizens Advisory Committee, p. 53. These comments support the rural utility reforms, not SCU or retirement of the Community Plan.

Read the 2024 staff report and agency comments

Source: County Comprehensive Plan One Water and Mobility. County compilation dated June 26, 2026. One Water 4.3.2–4.3.7: pp. 229–234. Mobility 5.1.2–5.1.4: p. 135. Constrained roads: pp. 250–251.

Read the County policy and full criteria

Visual

Split the screen into two sides:

COMMUNITY PLAN GOAL

Protect Water Resources

VS

ACTUAL TOOLS

Limited Water/Wastewater Options

Countywide Pathways Excluded

At the bottom:

Protecting water resources requires a planning framework that can respond to actual problems when they arise.

OPEN THE DOOR TO PREVENTION. Protecting water should mean evaluating every suitable tool before a problem becomes a crisis.

Source: County Comprehensive Plan One Water and Mobility. County compilation dated June 26, 2026. One Water 4.3.2–4.3.7: pp. 229–234. Mobility 5.1.2–5.1.4: p. 135. Constrained roads: pp. 250–251.

Read the County policy and full criteria

PROTECT RURAL CHARACTER. KEEP WATER OPTIONS OPEN. County policy says utility service cannot justify higher density or incompatible rezoning.

Source: County Comprehensive Plan One Water and Mobility. County compilation dated June 26, 2026. One Water 4.3.2–4.3.7: pp. 229–234. Mobility 5.1.2–5.1.4: p. 135. Constrained roads: pp. 250–251.

---

8. COMMUNITY PLAN VS COUNTY COMPREHENSIVE PLAN

Two Approaches to the Same Issue

KEYSTONE–ODESSA COMMUNITY PLAN	HILLSBOROUGH COUNTY COMPREHENSIVE PLAN
Relies heavily on private wells and septic	Has a broader water & wastewater framework
Limits some utility extensions	Has pathways for some environmental conditions

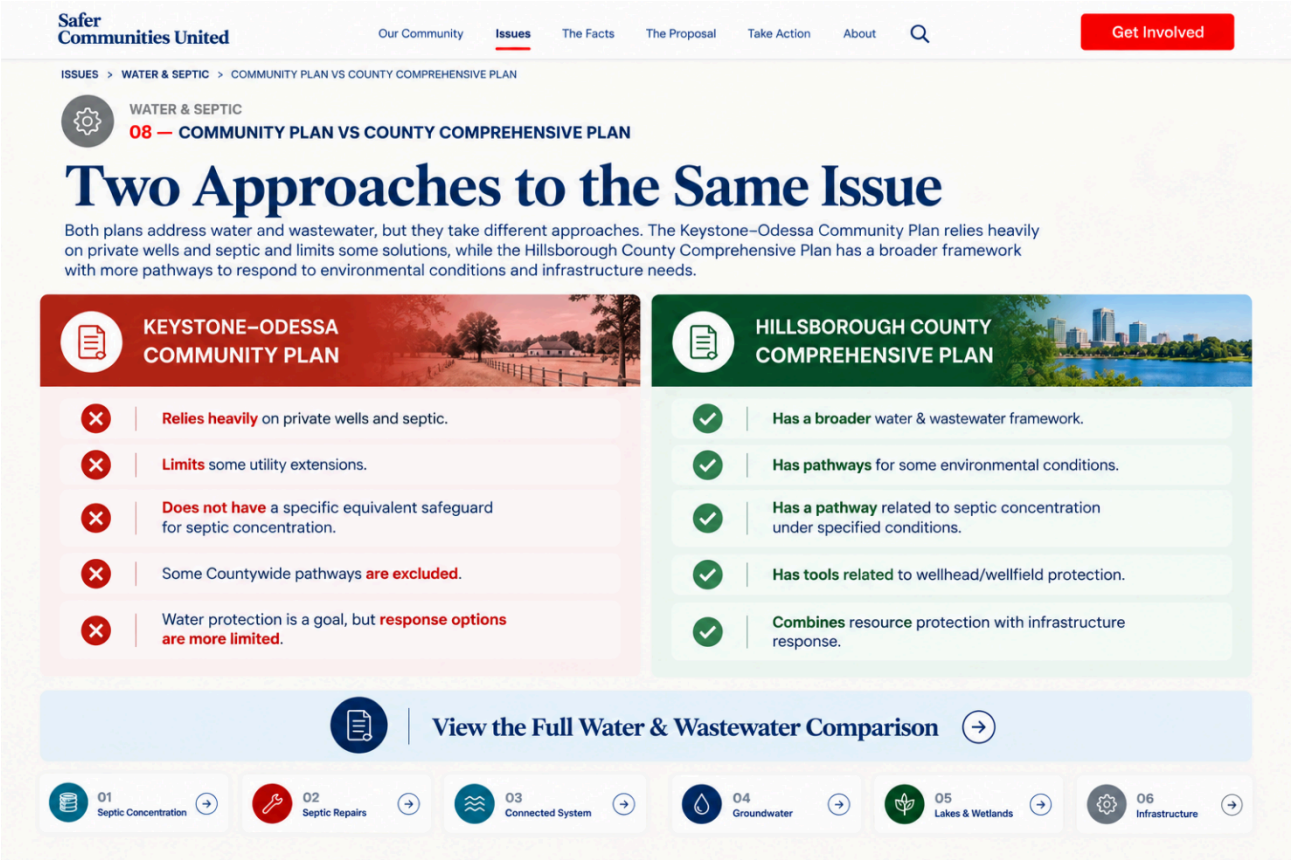
KEYSTONE–ODESSA COMMUNITY PLAN	HILLSBOROUGH COUNTY COMPREHENSIVE PLAN
Does not have a specific equivalent safeguard for septic concentration	Has a pathway related to septic concentration under specified conditions
Some Countywide pathways are excluded	Has tools related to wellhead/wellfield protection
Water protection is a goal, but response options are more limited	Combines resource protection with infrastructure response

Visual

Two red/green columns, following the comparison system already used in Roads & Safety.

CTA

View the Full Water & Wastewater Comparison →



09. EVIDENCE — LET READERS CHECK FOR THEMSELVES

See the Data and Records Behind the Issue

Do not turn this into a huge library. Only present the strongest sources as cards:

Septic Data — FLWMI Odessa ZIP 33556

Repair Records — EHDConst–Repair 1998–2023

Water & Well Maps — Wells, groundwater and protection areas

Public Records — Water/wastewater infrastructure and monitoring records

Planning Policies — Community Plan + One Water + County Comprehensive Plan

Each card includes:

Short Finding → Source → Date → View Original Document

---

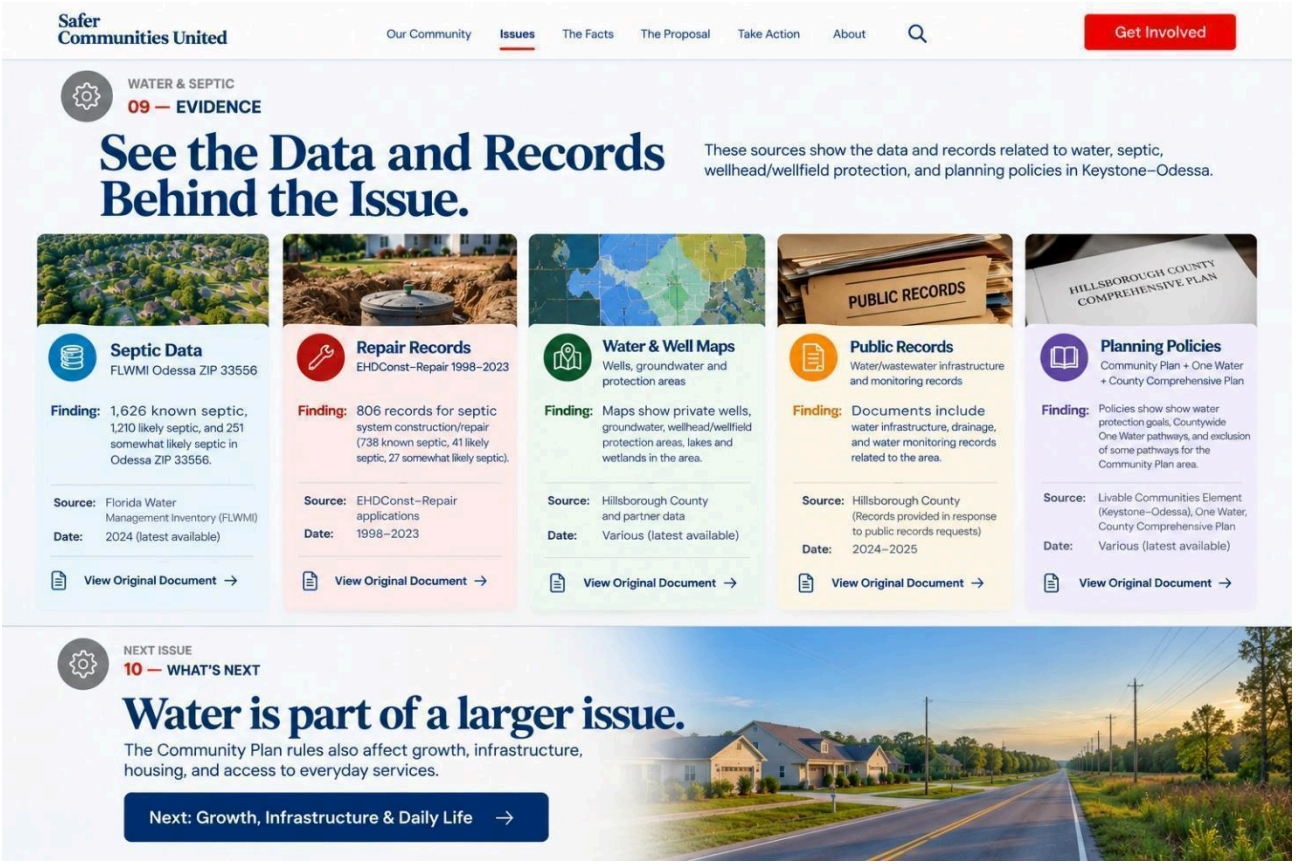
10. END OF PAGE — MOVE TO THE NEXT ISSUE

Water is part of a larger issue.

The Community Plan rules also affect growth, infrastructure, housing, and access to everyday services.

Next:

Growth, Infrastructure & Daily Life →



PAGE 05 — GROWTH, INFRASTRUCTURE & DAILY LIFE

This is a very important page because it shows that the Community Plan does not only affect roads and water; the rules about density, land, and development also directly affect housing, distance to services, travel needs, and the ability of infrastructure to keep up with the community.

The Master Assessment clearly identified this chain: a low-density pattern makes housing more spread out → services are farther away → greater dependence on cars → longer trips → more traffic pressure.

---

1. PAGE PURPOSE

Growth, Infrastructure & Daily Life must answer one question:

How are the rules created to keep Keystone–Odessa at a very low density affecting life today?

Page Flow

Community Has Changed → Growth Rules Remain Restrictive → Five-Acre/Low-Density Pattern → Spread-Out Housing → Services Farther Away → More Travel → More Pressure on Infrastructure → Community Plan vs County Plan → Health/Safety/Welfare

---

2. HERO — THE CORE ISSUE

Label

GROWTH & DAILY LIFE

Heading

The community has changed. Planning needs to keep up.

The Keystone–Odessa Community Plan maintains a very-low-density development pattern and limits where many commercial activities can be located and how large they can be. These rules affect housing, distance to services, travel needs, and the ability to provide infrastructure efficiently.

Visual

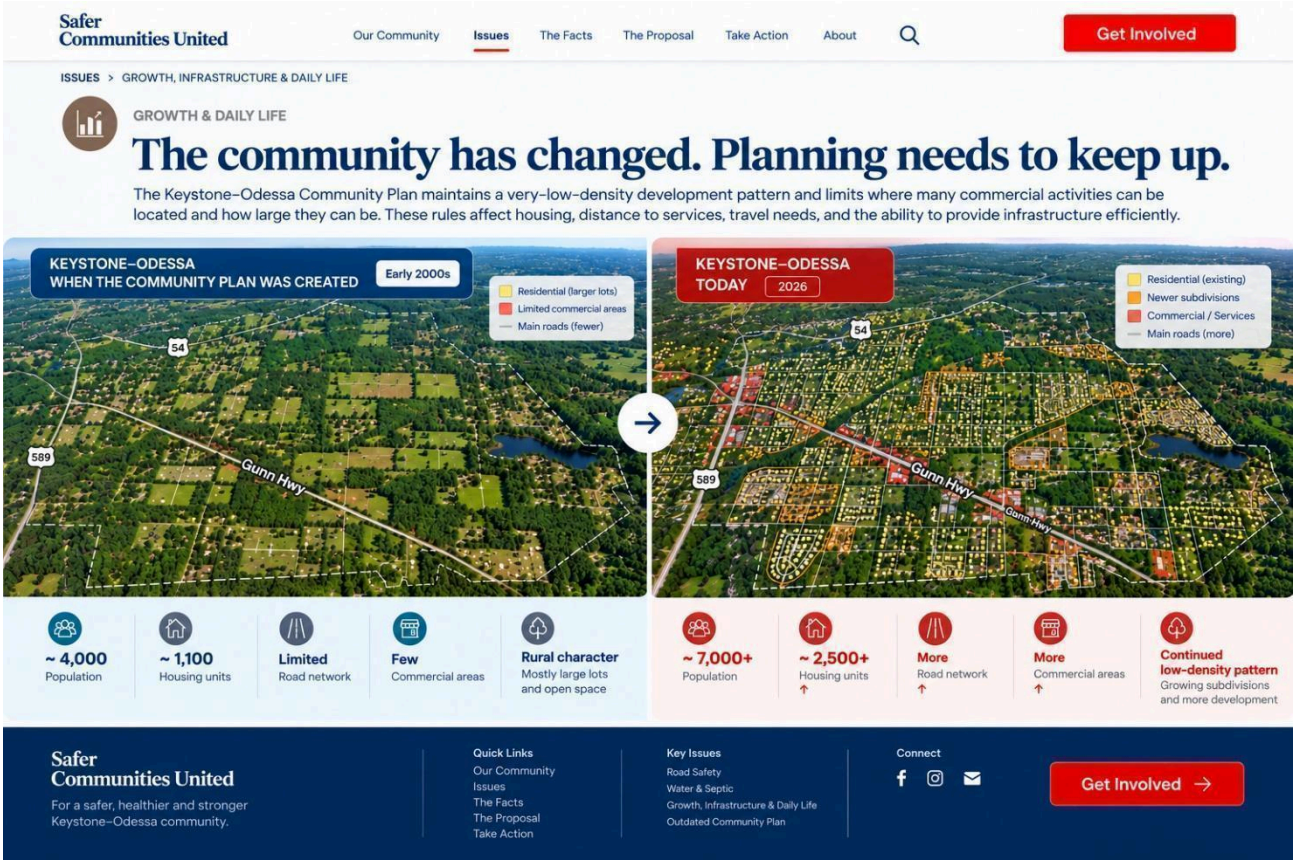
A split image/map:

> **KEYSTONE–ODESSA WHEN THE COMMUNITY PLAN WAS CREATED ↔ KEYSTONE–ODESSA TODAY**

Show residential areas, subdivisions, roads, services, and development.

The Master Assessment also specifically recommends the visual **“Keystone then vs Keystone today”** to show how population, development, traffic, and infrastructure have changed.

Editorial verification before launch: the population and housing counts in this legacy mockup are unverified sample data. Replace with verified, cited figures or omit them before publication.



---

3. THE COMMUNITY PLAN KEEPS DEVELOPMENT DENSITY VERY LOW

Five acres for one home creates a development pattern with wider consequences.

The Community Plan protects very-low-density residential development in the relevant areas, with policies centered around approximately one dwelling unit per five acres and limits on increasing density.

Visual

Visually compare the same amount of land:

> **5-acre pattern ↔ Moderate low-density pattern**

Below, show:

> **More land for the same number of households → Homes farther apart → Infrastructure must serve greater distances → Services farther away → More trips by car**

This should be one of the main visuals in Growth, Infrastructure & Daily Life.

4. LOW DENSITY AFFECTS HOUSING

Land rules determine what types of housing the community can provide.

Large-lot requirements increase the amount of land needed for each household and limit the number and variety of housing options. The assessment document also identifies potential impacts on younger families, workers, teachers, and seniors.

Visual

Three scenario cards:

5 ACRES / HOME → more land / household

SMALLER LOW-DENSITY LOT → less land / household

COUNTYWIDE FRAMEWORK → broader planning options

Include a map showing the areas affected by low-density policies.

Current on-screen copy for the selected image

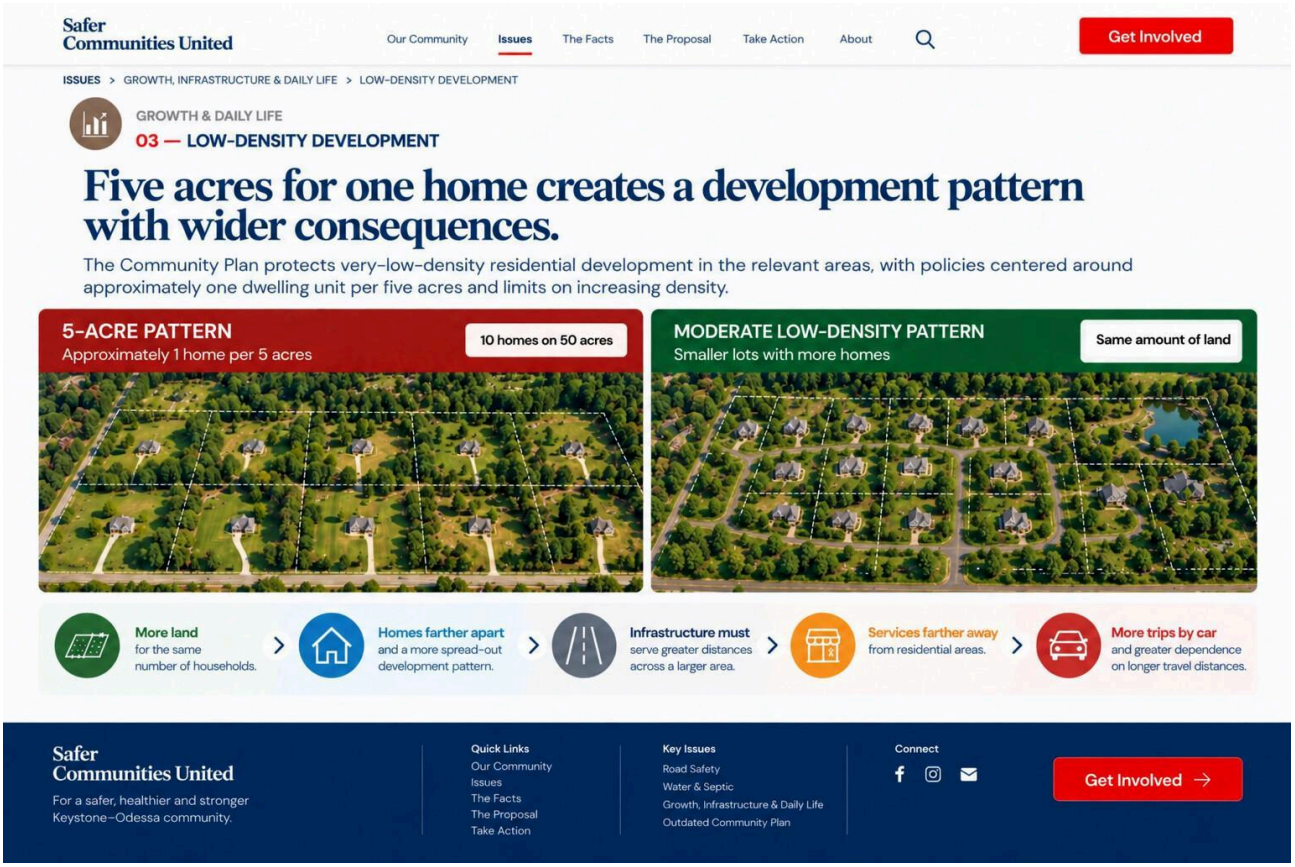
Left panel: 5-ACRE PATTERN | Approximately 1 home per 5 acres | 10 homes on 50 acres

Right panel: MODERATE LOW-DENSITY PATTERN | Smaller lots with more homes | Same amount of land

The label “10 homes on 50 acres” belongs only on the left. Retain the conceptual-illustration qualification.

Selected image — Natural Rural Density Comparison

Visual direction: give both examples comparable natural character and tree cover. Show narrow, unobtrusive rural lanes on the right while preserving the homes, lot comparison, and labels.



Conceptual illustration, not a measured or engineered site plan.

---

5. THE COMMUNITY PLAN LIMITS WHERE SERVICES CAN DEVELOP

Everyday needs still exist even when services are farther away.

The Community Plan concentrates commercial development in certain locations and limits the scale and characteristics of commercial uses in other areas.

People still need:

Food · Pharmacy · Healthcare · Childcare · Restaurants · Services · Jobs

When these needs are located farther away from residential areas, people must travel farther to access them.

Visual

Map:

Residential Areas + Grocery + Healthcare + Childcare + Employment

((Allow the map to show drive time from different residential areas.))

Demo: retain the existing static service-map illustration and its illustrative travel-time caveat. No location lookup or route calculation.

Current on-screen copy for the selected image

Drive times are estimates and for illustrative purposes only. Actual times may vary depending on location and traffic conditions.

Grocery Stores — 10–25 minutes

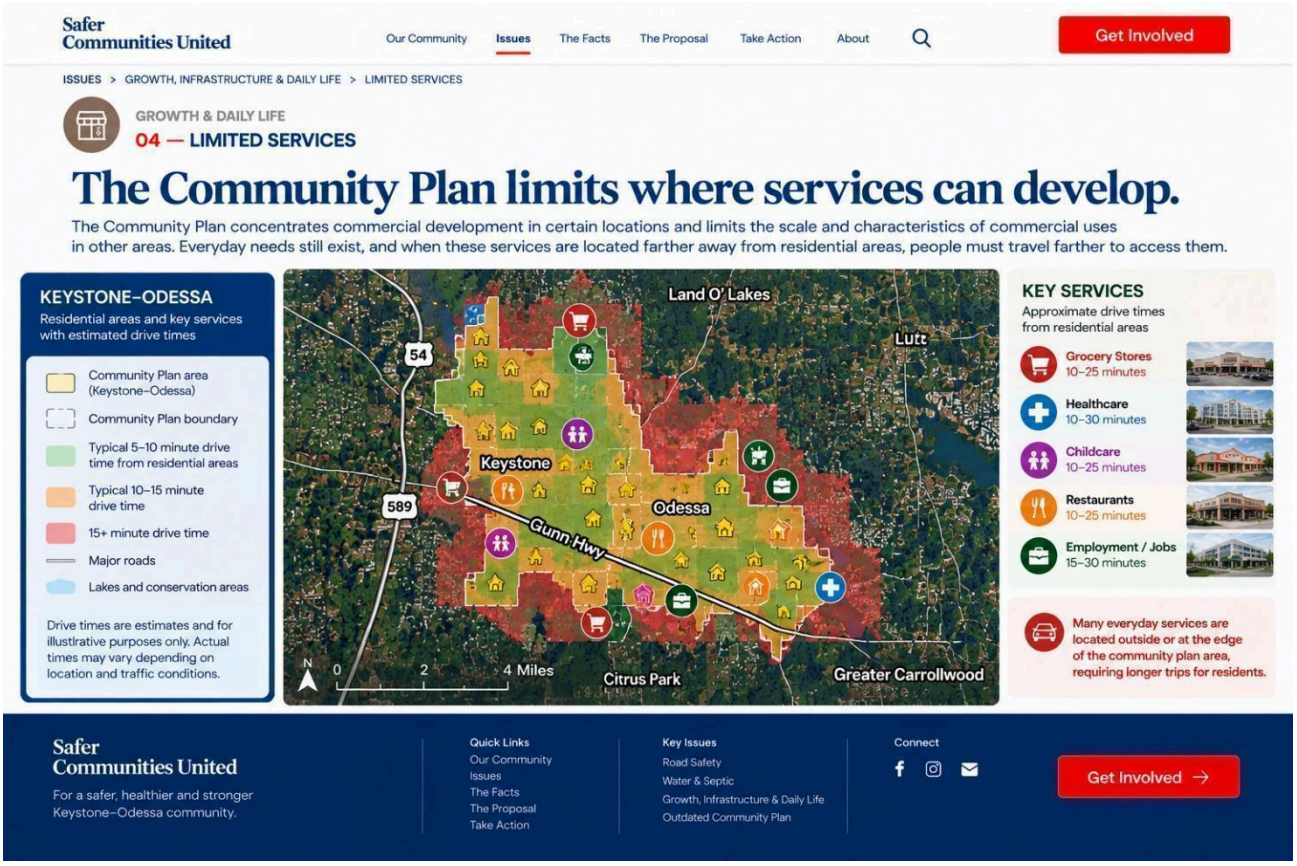
Healthcare — 10–30 minutes

Childcare — 10–25 minutes

Restaurants — 10–25 minutes

Employment / Jobs — 15–30 minutes

These are illustrative image labels, not newly verified local travel-time findings.



---

6. GROWTH AND INFRASTRUCTURE NEED TO BE PLANNED TOGETHER

More people means more demand for roads, water, services, and infrastructure.

Use a timeline/map:

2001 → 2010 → 2020 → 2026

Track at the same time:

Population · Housing · Subdivisions · Roads · Water/Wastewater · Services · Traffic

Main Message

The community changes. Infrastructure and the planning framework must be able to adapt to that change.

The Master Assessment identifies that the gap between actual growth and the Plan's old assumptions can make it increasingly difficult to provide roads, services, and infrastructure.

---

7. COMMUNITY PLAN VS COUNTY COMPREHENSIVE PLAN

Two Approaches to Growth and Development

KEYSTONE–ODESSA COMMUNITY PLAN	HILLSBOROUGH COUNTY COMPREHENSIVE PLAN
Emphasizes a very-low-density rural pattern	Plans land use through a countywide framework that considers growth, development, and infrastructure together
Policies of approximately 1 dwelling / 5 acres in the relevant areas	Provides additional land-use and development tools for evaluating how and where development can occur
Limits commercial development by location, scale, and rural character	Allows service and development needs to be evaluated together with land use and infrastructure
Limits the ability of the development pattern to adapt	Allows growth to be evaluated together with infrastructure and planning standards

This section is only a comparison summary. Detailed policy analysis is reserved for the Full Comparison Page.

CTA

Roads & Safety, Water & Septic, and Growth, Infrastructure & Daily Life introduce the three major groups of consequences.

On-screen continuation: Outdated Community Plan. Link: Learn About the Community Plan →. Destination: the existing Outdated Community Plan issue overview and Community Plan vs. County Comprehensive Plan comparison.

PAGE 06 — COMMUNITY PLAN VS. COUNTY COMPREHENSIVE PLAN

1. PAGE PURPOSE

This page places the Keystone–Odessa Community Plan and the Hillsborough County Comprehensive Plan side by side so residents can clearly see:

- What additional restrictions or requirements the Community Plan adds.
- What policies and tools the Countywide framework already has for health, safety, infrastructure, environment, and development.
- Removing the Community Plan layer would change the planning framework; it would not leave Keystone–Odessa without planning rules.
- How these differences relate to the issues demonstrated on Pages 3–5.

The current comparison sheet is also built according to this exact structure:

> **Keystone–Odessa Plan → reason for change → source → County Plan → Countywide policies supporting health/safety/welfare → source.**

Page Flow

Two Existing Frameworks → What the Community Plan Adds → Issue-by-Issue Comparison → What Tools the County Framework Has → What Changes if the Community Plan Is Removed → Lead to Proposed Change

---

2. COMPARISON 01 — ROADS & SAFETY

Current on-screen text — Roads & Safety Comparison

SHOULD THE LOOK OF A ROAD MATTER MORE THAN THE SAFETY OF THE PEOPLE USING IT?

We can value rural character and still question the restrictions that shape our roads.

COMMUNITY PLAN	COUNTY FRAMEWORK
ROAD DESIGN	
WHY LIMIT THE OPTIONS BEFORE ASSESSING THE NEED? The Community Plan prioritizes rural, two-lane road character and limits certain changes.	**ASSESS SAFETY, MOBILITY AND LOCAL CONDITIONS.** Countywide policies address road-user needs and context-sensitive design.
GUNN HIGHWAY	
SHOULD A ROAD RESTRICTION BE BEYOND QUESTION? Gunn Highway is subject to expansion restrictions.	**REASSESS THE RESTRICTIONS.** County policy calls for reevaluating constrained roads before each long-range transportation plan update.
LIGHTING	
DOES SOMEONE HAVE TO GET HURT FIRST? The Community Plan discourages street lighting and allows it when public safety is at risk.	**LIGHTING CAN RESPECT ITS SURROUNDINGS.** County policies address context-sensitive lighting and intersection visibility.
WALKING AND CROSSINGS	
WHY SHOULD RURAL CHARACTER LIMIT THE DISCUSSION? The Community Plan permits specified improvements and supports trails while retaining rural road character.	**MAKE PEOPLE'S NEEDS CENTRAL TO THE ASSESSMENT.** County policies address crossing visibility, walking, cycling and safe routes to schools.

PROTECT THE CHARACTER OF THE AREA. QUESTION THE RULES THAT GOVERN ITS ROADS.

Countywide policies already apply. Retiring the Community Plan and changing related restrictions would not automatically approve or fund road projects.

View the Full Roads Comparison →

Selected image — Roads & Safety Comparison

3. COMPARISON 02 — WATER & WASTEWATER

From Infrastructure Limits to More Response Tools

COMMUNITY PLAN

- Emphasizes the protection of water resources.
- Relies heavily on wells/septic.
- Places specific limits on public water/wastewater.
- Some Countywide response pathways do not apply in the same way within the boundary.

COUNTY FRAMEWORK

- Has a broader water/wastewater planning framework.
- Has policies related to environmental conditions.
- Has pathways related to septic concentration under specified conditions.
- Has tools related to wellhead/wellfield protection.

Central Visual

SAME PROBLEM

COMMUNITY PLAN

Fewer response pathways

↔

COUNTY FRAMEWORK

Broader response toolbox

CTA

View the Full Water Comparison →

Current on-screen copy for the selected image

COMMUNITY PLAN

Emphasizes water protection but has more limited infrastructure response options.

Makes protection of water resources a priority, but does not contain the same requirement to consider soil conditions and permeability.

Does not contain a comparable policy for aging or failing septic systems.

Does not create a specific septic/wastewater response for wellhead or wellfield protection areas.

Calls for stormwater management plans, but does not set the same technical standard for cumulative flooding and water quality.

COUNTY FRAMEWORK

Provides a broader planning framework and more specific response tools.

Requires development decisions to consider physical land and soil conditions, including permeability.

Provides a pathway to respond when septic creates a documented environmental problem.

Allows centralized service in certain Wellhead Resource Protection Areas and Tampa Bay Water Wellfield Mitigation Areas when conditions are met.

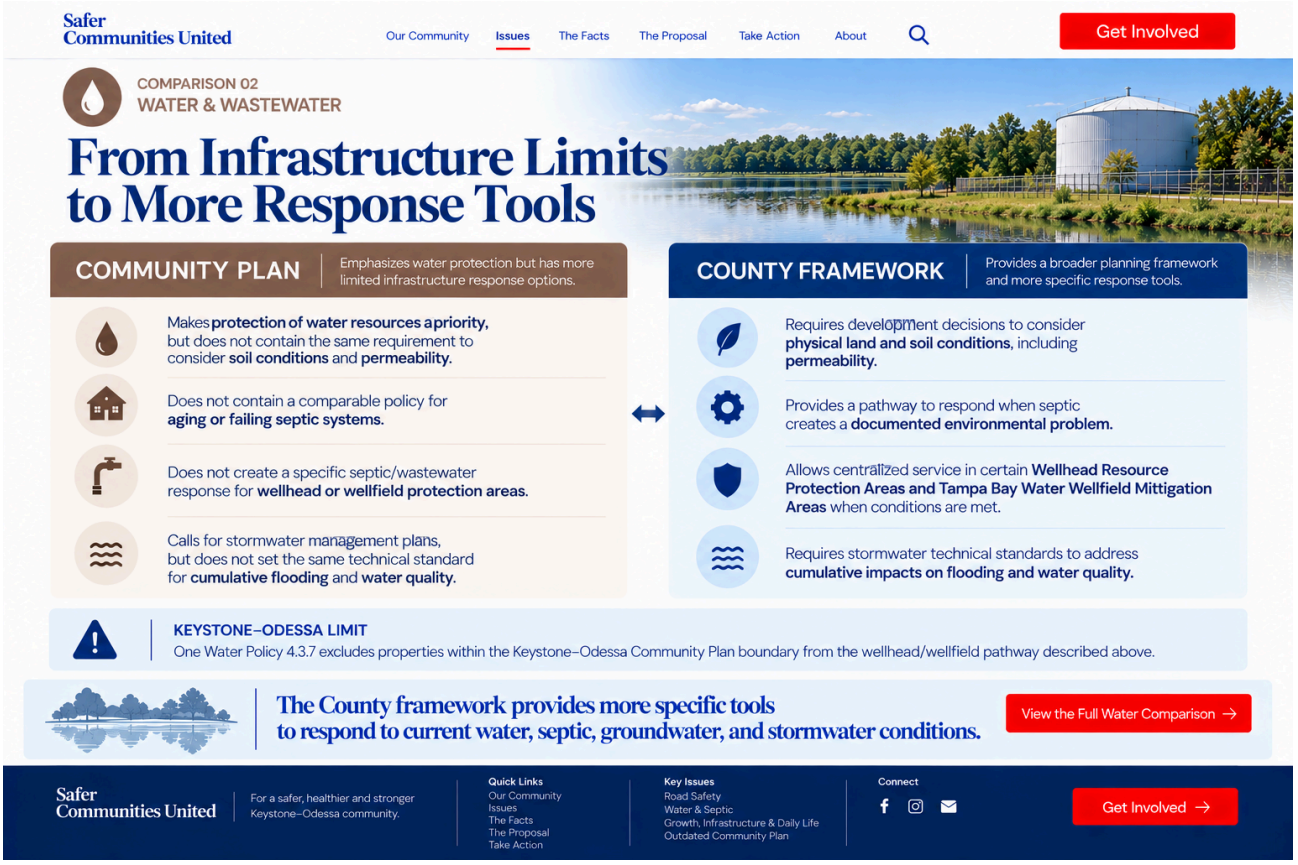
Requires stormwater technical standards to address cumulative impacts on flooding and water quality.

KEYSTONE–ODESSA LIMIT

One Water Policy 4.3.7 excludes properties within the Keystone–Odessa Community Plan boundary from the wellhead/wellfield pathway described above.

The County framework provides more specific tools to respond to current water, septic, groundwater, and stormwater conditions.

View the Full Water Comparison →



4. COMPARISON 03 — GROWTH & HOUSING

Two Ways of Managing Growth and Housing

COMMUNITY PLAN

- Uses approximately one dwelling unit per five acres in the relevant areas.
- Favors a low-density, scattered residential pattern.
- Its residential provisions do not directly address housing affordability.
- The residential policies focus strongly on maintaining the area's rural development pattern.

COUNTY FRAMEWORK

- Uses mapped land-use categories that establish maximum densities and intensities.
- Rural density limits still apply, including the general one dwelling per five gross acres policy, with specified exceptions.
- Has housing goals and policies related to housing choice and affordability.

- Supports tools including infill, small lots, accessory homes, and different housing types, with adequate infrastructure.

Result to Show

The County framework still protects rural-area density while also providing explicit policies for housing choice and affordability.

Visual direction: Use the preferred Screenshot 110 composition, including its rural landscape header, two comparison columns, four illustrated rows per column, bottom result banner and comparison CTA.

9. IF THE COMMUNITY PLAN IS REMOVED, WHAT REMAINS?

This should be the most important visual in Community Plan vs. County Comprehensive Plan because it addresses a question residents are very likely to have:

Keystone–Odessa will still be planned and managed.

Visual

REMOVE

KEYSTONE–ODESSA COMMUNITY PLAN

Area-specific policy layer

↓

REMAINS

HILLSBOROUGH COUNTY COMPREHENSIVE PLAN

LAND DEVELOPMENT CODE

FUTURE LAND USE POLICIES

MOBILITY & SAFETY POLICIES

WATER & ENVIRONMENTAL POLICIES

ZONING & DEVELOPMENT STANDARDS

APPLICABLE HEALTH / ENGINEERING / ENVIRONMENTAL STANDARDS

The project's comparison material describes the central request in exactly this direction: remove the Community Plan as a separate policy layer and have decisions governed by the County Comprehensive Plan, Land Development Code, and current standards.

Message to Highlight

The proposed change is a change to the policy layer that applies to Keystone–Odessa. The Countywide planning framework continues to apply.

RETIRE THE EXTRA PLAN. KEEP THE PROTECTIONS. Ask the County to retire the separate Community Plan, reconsider related restrictions and retain enforceable safeguards through the amendment process.

Implementation: place the preceding additional campaign passage below the viewport shown in the existing mockup. Retain the current diagram and headline.

PAGE 08 — EVIDENCE & RECORDS

1. PAGE PURPOSE

Evidence & Records is the evidence center of the entire website, bringing together the data, maps, public records, Community Plan, County policies, and official documents used throughout the issue and comparison sections.

This page must help visitors:

- Check the facts behind the issues presented on the website.
- View the data, maps, and public records directly.
- Understand what each source proves.
- Go from a finding on the website to the original document.

Evidence & Records does not analyze Roads, Water, or Growth again. Roads & Safety, Water & Septic, and Growth, Infrastructure & Daily Life already do that. Evidence & Records serves as the evidence hub.

---

1. EXPLORE EVIDENCE BY ISSUE

This should be the main navigation of Evidence & Records.

Use 4 groups:

ROADS & SAFETY

Data: Crash · Severity · Traffic · Speed

Maps: Road Network · Corridors · Intersections · Community Plan Boundary

Records: Projects · Studies · Agency Responses

Policies: Gunn Highway · Road Configuration · Lighting

View Road Evidence →

WATER & SEPTIC

Data: Septic Classification · Repair Records

Maps: Septic · Wells · Groundwater · Wellfield/Wellhead · Lakes & Wetlands

Records: Water Infrastructure · Drainage · Monitoring

Policies: Community Plan · One Water · Water/Wastewater Policies

View Water Evidence →

GROWTH, HOUSING & SERVICES

Data: Housing · Lots · Development · Travel

Maps: Land Use · Residential Pattern · Services · Infrastructure

Records: Development & Infrastructure Records

Policies: Density · Commercial Development · Future Land Use

View Growth Evidence →

COMMUNITY PLAN & COUNTY FRAMEWORK

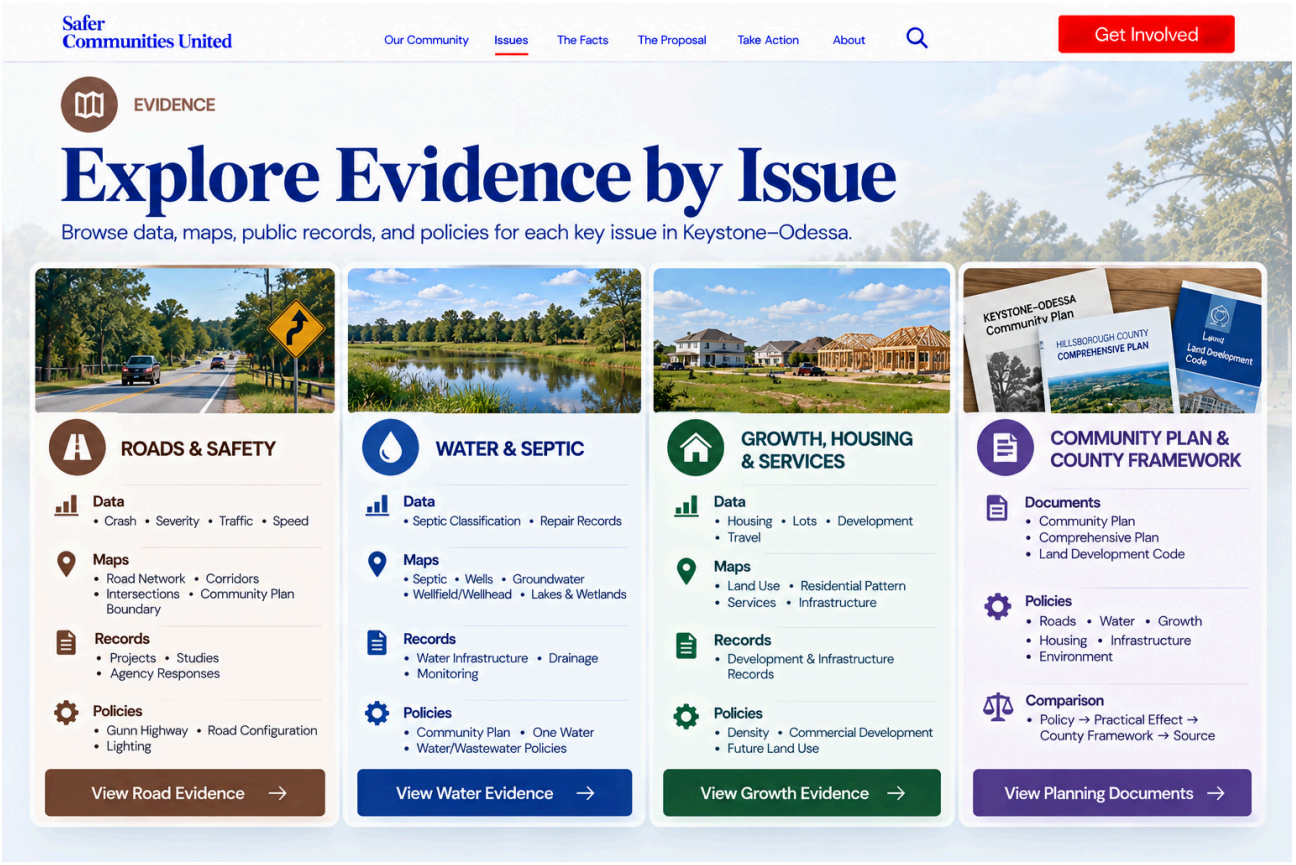
Documents: Community Plan · Comprehensive Plan · Land Development Code

Policies: Roads · Water · Growth · Housing · Infrastructure · Environment

Comparison: Policy → Practical Effect → County Framework → Source

View Planning Documents →

This structure directly matches Community Plan vs. County Comprehensive Plan, where evidence is organized by Roads, Water, Growth, Housing, Commercial Development, Infrastructure, Environment, and Rural Character.



---

2. EVIDENCE LIBRARY

This is the section for people who want to go deeper.

Find All Data and Documents

Demo: browse the selected source cards and supplied document links. ((Search and browse the full collection of data, maps, public records, planning documents, and studies related to Keystone–Odessa.))

((The developer creates filters:))

((**Topic:**))

((Roads | Water | Septic | Growth | Housing | Infrastructure | Services | Environment | Community Plan))

((**Source Type:**))

((Data | Map | Public Record | Planning Document | Policy | Study))

((**Agency**))

((**Year**))

Each Result:

Document Name

Document Type · Agency · Date

The website uses this document to: [short description]

View the Original Document →

Demo: use a fixed list of available source cards; the upper part of Evidence & Records remains visual and easy to understand. ((Important: this is the actual document library. The upper part of Evidence & Records must still remain visual and easy to understand.))

Editorial verification before launch: the library result count and example record metadata are illustrative. Verify the real inventory and each source before publication; the mockup is not evidence of 124 actual results.

Selected image — Evidence Library

((Future functionality shown in this artwork is for later. For the first demo, retain the image and use static previews or simple page links only.))

PAGE 09 — ACTION: YOUR VOICE CAN CREATE CHANGE

PAGE PURPOSE

This is the final step in the website's main journey. After visitors have:

seen the problems → understood each issue → viewed the data, maps, and records → understood how the Community Plan affects the community → compared the two planning frameworks → understood the proposed direction for change,

Action moves them toward specific actions.

The page should create the feeling:

"I understand the issue. What can I do now?"

---

1. HERO — YOUR VOICE CAN HELP SHAPE THE FUTURE OF KEYSTONE–ODESSA

Headline

DEMAND CHANGE. RETIRE THE KEYSTONE–ODESSA COMMUNITY PLAN.

Content

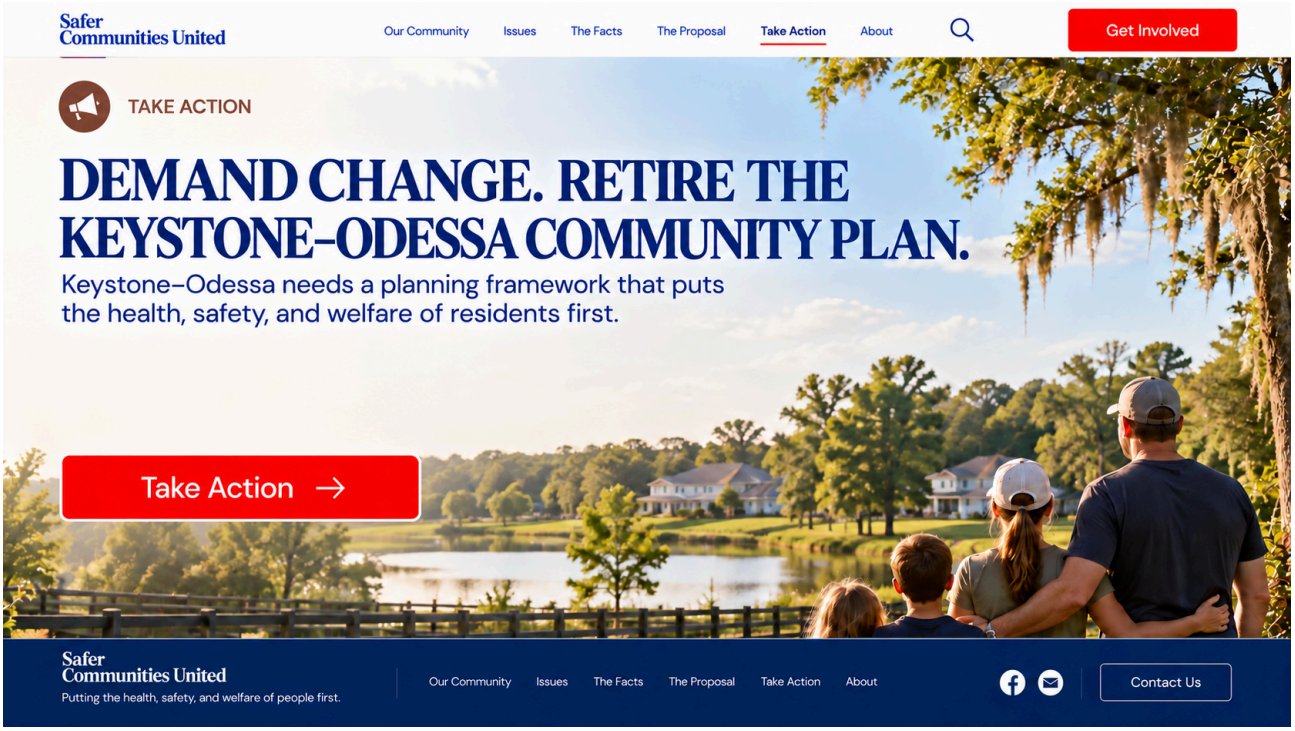
Keystone–Odessa needs a planning framework that puts the health, safety, and welfare of residents first.

Visual

A community-focused image of Keystone–Odessa: residents, families, neighborhoods, or the local landscape.

Avoid reusing "problem" visuals such as crashes, septic, or dangerous roads because Action focuses on community participation.

Selected image — Action hero



---

2. THREE MAIN ACTIONS

This is the central section of Action. Display it as 3 large blocks, with each block leading to one clear action.

01 — ADD YOUR SUPPORT

Support a safer and more appropriate planning framework for Keystone–Odessa.

Residents can show their support for replacing the current Keystone–Odessa Community Plan policy layer with the Countywide planning framework, together with the necessary protections presented in the Proposal section.

THE COUNTY CAN CHANGE COURSE. The 2024 minutes record the Board's ability to include the area in the future. Ask commissioners to reopen that decision.

Read the Board's May 9, 2024 discussion — pages 39–40

Additional record: In its September 23, 2026 response, Planning Commission staff reported that the Board had not requested work on a Keystone–Odessa update. This is a dated status response.

Read the September 23, 2026 agency response

Button

Become a supporter and stay updated →

> **When clicked → offers "Become a supporter and stay updated" and "Read and sign the petition" as separate actions. The supporter application is specified immediately below.**

This must be the most prominent CTA on the page.

SUPPORTER APPLICATION — ONE COMBINED FORM

Placement: Action → 01 — ADD YOUR SUPPORT. Offer two separate routes: “Become a supporter and stay updated” opens this combined application; “Read and sign the petition” opens the exact approved petition and its own signing process.

The application below keeps the wording, options, fields, declarations and signature/date from all three supplied paper forms. Only the three audience choices are brought together. The two pages below represent one continuous online form.

Demo form layout and later implementation requirements

Show non-editable example checkboxes for the three audience choices. Keep all choices unselected initially. Preserve the four participation choices and the Email / Text / Call choices exactly; do not add an “Other” choice or replace the signature with a consent checkbox. ((Later: enable selection of whichever audience choices apply.))

For the demo, preserve STREET ADDRESS and PHONE as optional labels and show every remaining field, SIGNATURE and DATE as non-editable examples. ((Keep STREET ADDRESS and PHONE optional. Preserve every remaining information field, SIGNATURE and DATE. Implement an explicit signature step and date field; do not count this application as a petition signature or statutory voting membership.))

Keep the original mission, Consent, Privacy and return instructions visible, verbatim. Do not publish a supporter list or add a donation request. ((Later: configure storage, contact preferences and access to honor that text before launch. Public submission of any supporter list requires the separate permission promised on the paper forms.))

After the map comparison, add a “Become a supporter” link to this application. Keep “Read the petition” as a separate link. The opening homepage remains unchanged.

These pages specify the form for the website. They do not activate a live form, collect information or publish the website.

Demo only: display this combined application as a preview. No information, signature or date is entered, stored or sent. The supporter route and petition route remain separate.

SAFER COMMUNITIES UNITED

Supporter Application

For Keystone-Odessa residents

☐ I live in Keystone-Odessa.

For people living in communities adjacent to Keystone

☐ I live in a community adjacent to Keystone.

For anyone who travels on Gunn Highway

☐ I travel on Gunn Highway.

Safer Communities United is a Florida nonprofit civic organization working to protect the health, safety, and welfare of the people of Keystone-Odessa. We educate the public and advocate for a lawful County process to retire the Keystone-Odessa Community Plan and apply the otherwise applicable policies of the Hillsborough County Comprehensive Plan.

How I would like to participate

☐ Receive news and campaign updates

☐ Volunteer at community outreach events

☐ Help collect petition signatures

☐ Learn about formal membership if offered

Your information

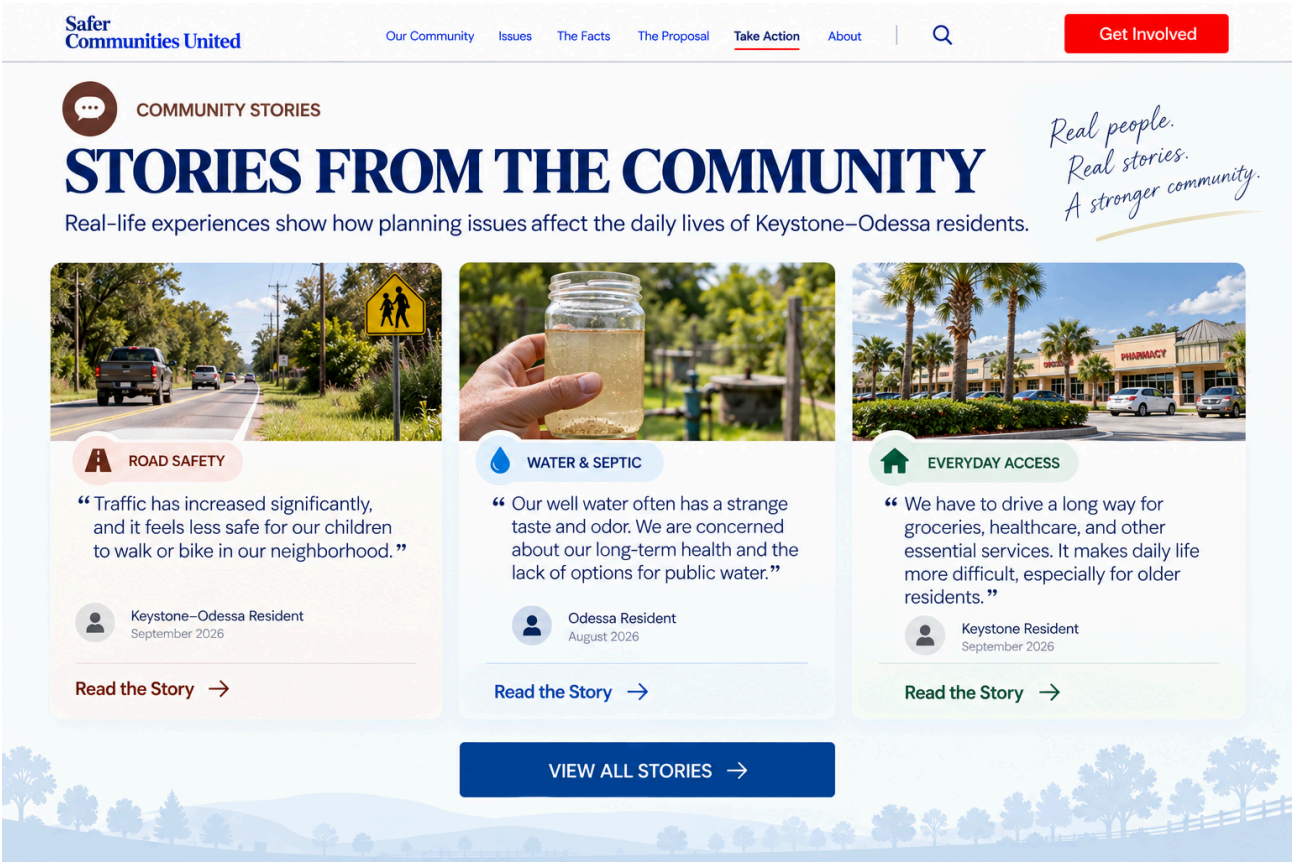
((If there are many stories later, this button leads to a separate Community Stories page.))

Editorial verification before launch: these resident quotations and dates are sample testimonial cards, not authenticated submissions. Replace with real stories only after publication permission and approval.



---

4. FINAL CTA — TOGETHER TOWARD A SAFER KEYSTONE–ODESSA

This is the final CTA of the entire website journey.

Headline

PUT THE HEALTH, SAFETY, AND WELFARE OF RESIDENTS FIRST.

A short paragraph reconnecting to the Home page message:

Let’s support a future where planning responds to the actual conditions of Keystone–Odessa and protects residents, infrastructure, water resources, and the community for current and future generations.

PUT PEOPLE FIRST. RETIRE THE KEYSTONE–ODESSA COMMUNITY PLAN. Read the evidence, read the petition and add your name to the request for the County to initiate the amendment process. Make the community’s demand impossible to ignore.

Implementation: keep the campaign headline and additional campaign passage. Replace the old form with the separate petition flow below. Show the complete approved petition before the fields; the design remains a draft until the remaining launch checks are resolved.

Primary CTA

READ AND SIGN THE PETITION →

Residents, property owners, workers and community supporters can read the full petition and add their support through its own signing process. Signing does not join the supporter network or create statutory voting membership.

Petition Form

SIGN THIS PETITION →

Petition flow

Design status: petition wording approved. Use Petition_Larger_Text.pdf, September 24 version 3, including the request to remove associated policies and repeal implementing Land Development Code provisions, including Part 3.08.00. The exact text below is the approved version. The remaining launch checks still apply; this is a design specification, not an active signature form.

Demo: show the complete approved petition, followed by non-editable examples of its four fields. The signing button opens “Demo only. No signature has been collected.” Keep the public-records warning visible; no submission or saved-success screen is used.

1 Read the petition

Keep “Become a supporter and stay updated” and “Read and sign the petition” as separate routes. The supporter application and its existing consent stay unchanged. Petition signing must not enroll someone in that network.

Show the chosen paper petition in full as selectable, readable text above the fields on desktop and mobile. Preserve its title, recipient, wording, requested actions, signing declaration and independent-civic-petition notice. A summary or download link does not replace the full text.

SAFER COMMUNITIES UNITED

Retire the Keystone Odessa Community Plan

Retire the separate local plan and rely on the Hillsborough County Comprehensive Plan.

TO THE HILLSBOROUGH COUNTY BOARD OF COUNTY COMMISSIONERS

We, the undersigned residents, property owners, workers, and community supporters, respectfully request that Hillsborough County initiate a Comprehensive Plan amendment and complete all legally required analysis, notice, and public hearings to retire the Keystone-Odessa Community Plan as a separate community-specific plan. Our goal is for Keystone-Odessa to rely on the otherwise applicable Hillsborough County Comprehensive Plan as its governing planning framework, while all applicable zoning, environmental, infrastructure, and safety protections remain enforceable.

Why we are asking

We are concerned that the existing plan contains outdated, unclear, or conflicting provisions; restricts some transportation changes without requiring current safety evidence; and omits measurable protections for emergency access, disability access, safe school travel, private wells and septic systems, and flood resilience. Any replacement policy should protect the rural character and natural resources of Keystone-Odessa while placing the health, safety, and welfare of the people first.

What the County should do

• Remove the Keystone-Odessa Community Plan and its associated policies from the Hillsborough County Comprehensive Plan. Repeal implementing Land Development Code provisions, including Part 3.08.00 (Keystone-Odessa Rural Development Standards), through the required public amendment processes. Retain otherwise applicable County protections.

• Rely on the Hillsborough County Comprehensive Plan as the principal planning framework for Keystone-Odessa.

• Use current data on crashes, traffic, emergency response, evacuation, flooding, wells, septic systems, accessibility, housing, and environmental conditions.

• Hold open public meetings and allow all affected residents to participate before making a decision.

By signing, I support the request above. I understand that this petition may be submitted to public agencies and that my printed name, community or ZIP code, signature, and date may become public records.

Independent civic petition - not sponsored by Hillsborough County. Please sign only once.

((Recipient verified in both papers: Hillsborough County Board of County Commissioners. Both papers invite residents, property owners, workers and community supporters, and say “Please sign only once.” They do not state an age, voter-registration or residency-only rule. Confirm any additional eligibility or submission requirements before adding them.))

2 Add your details and choose

((Use the paper’s four fields: Printed name; Community or ZIP; Signature; Date. Keep an explicit signature step. Confirm the accessible signature method and the recipient’s submission requirements before enabling the form. Do not add a required email, street address, phone number or comment field without a defined need and approval.))

((Required, initially unticked: ☐ I support the petition above. Keep the paper’s declaration directly beside the signing controls, visible before submission:))

By signing, I support the request above. I understand that this petition may be submitted to public agencies and that my printed name, community or ZIP code, signature, and date may become public records.

Footer from both papers: Independent civic petition - not sponsored by Hillsborough County. Please sign only once.

Privacy and confirmation

((**3 Keep email updates optional**))

((Proposed separate option, subject to approval and working unsubscribe controls: ☐ Email me campaign updates. I can unsubscribe. Start unticked. Show "Email — only for updates" only when selected, and use it only for that choice. Leaving it unticked must not prevent petition signing. Do not automatically subscribe signers or import supporter-network consent.))

((**4 Explain data use before signing**))

((The paper already warns that printed name, community or ZIP, signature and date may become public records. Keep that warning prominent. Do not promise confidentiality or anonymity. Do not publish signers' contact details or treat petition consent as permission to display their names on the website.))

((Complete this privacy notice before launch: "Your submission is managed by [approved organization/contact]. We collect [approved fields] to record your support and [approved submission purpose]. We may provide [exact fields] to [named recipient/public agencies], where they may become public records. [Approved explanation of optional email use, access, retention and correction/withdrawal requests]. Contact: [working contact]." These brackets are decisions to fill in, not approved promises.))

((**5 Submit and confirm the actual result**))

((Button: SIGN THIS PETITION →. Check the required fields, explicit support and signature step. Save the submission securely with the exact petition version, declaration, date/time and separate update choice. Show success only after the server confirms the record was saved. A click, loading screen or sent request is not confirmation.))

((**Confirmation screen: "Thank you. Your petition submission has been saved." Show the saved reference/date when available, a "Return to the petition" link and the approved corrections contact. Report the email-update choice separately. Do not claim that the County has received, accepted or counted the petition unless that later outcome is verified.**))

((If saving fails: "We couldn't confirm that your submission was saved. Please try again." Preserve the entered details, guard retries against duplicate records and do not show a success count. Add an email-confirmation step only if it is separately chosen, explained before signing and implemented.))

((**Before enabling signatures**))

((Approve any eligibility rules, signature method, County delivery process, privacy notice, responsible contact and any optional update service. Test storage, consent, duplicate handling, errors, confirmation, mobile layout and keyboard access end to end. This independent civic petition must not be described as an official election or ballot petition, or as legally sufficient merely because the web form works.))

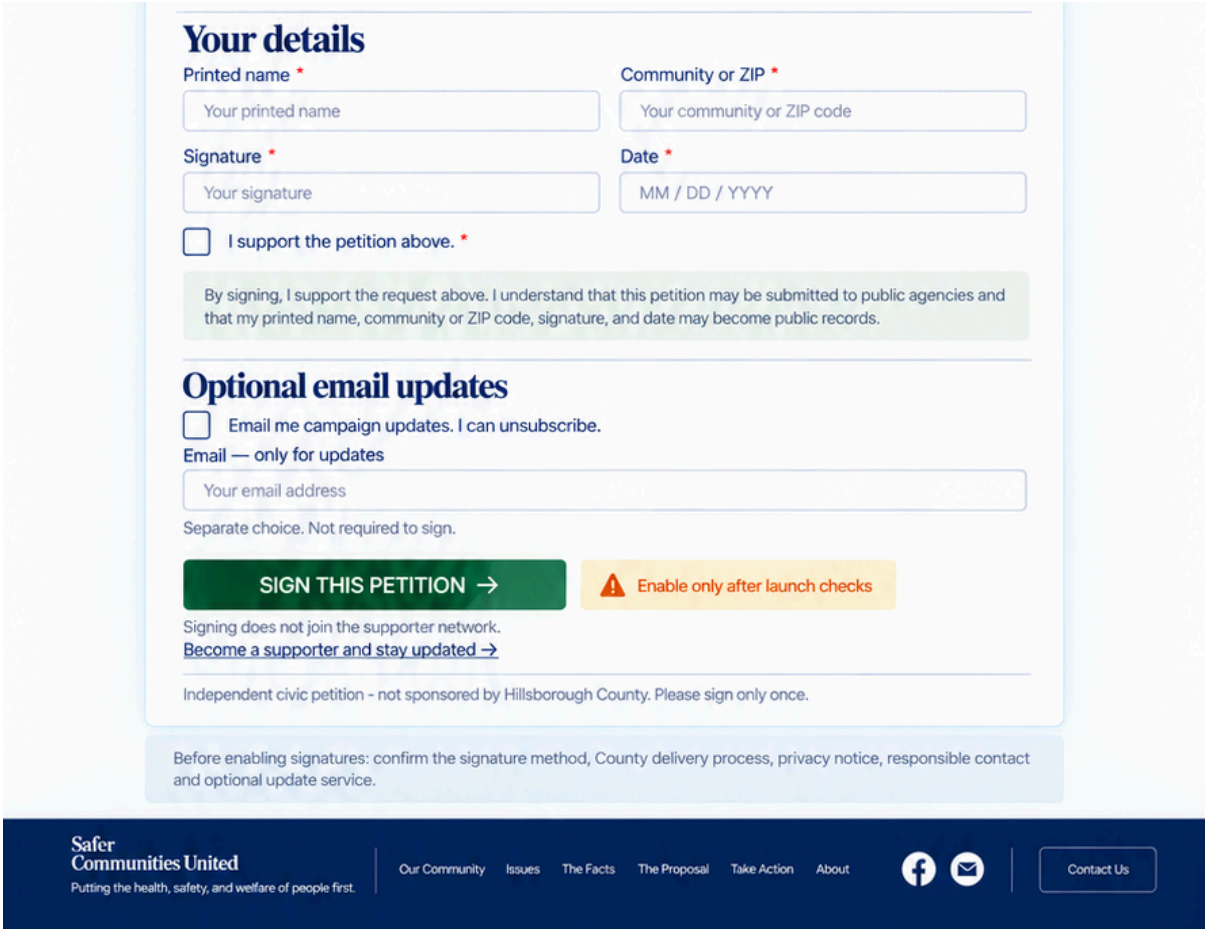
Selected image — Approved Petition (1 of 2)

((Future functionality shown in this artwork is for later. For the first demo, retain the image and use static previews or simple page links only.))

Approved wording shown in full before the fields. Launch checks remain required.

Selected image — Approved Petition (2 of 2)

((Future functionality shown in this artwork is for later. For the first demo, retain the image and use static previews or simple page links only.))



Illustrative design with the approved petition wording. Demo: preserve the image; the optional email area is a static example only. ((Later: optional email updates remain a separate choice. Reveal the optional email area only after its separate checkbox is selected. Privacy, contact, retention, signature method, County submission and end-to-end launch checks remain unresolved.))
